CHAPTER 7: DROUGHT RESPONSE INFORMATION, ACTIVITIES, AND RECOMMENDATIONS

7.1 DROUGHTS OF RECORD IN THE REGIONAL WATER PLANNING AREA

Region M relies heavily on water from the Rio Grande, managed through Amistad and Falcon Reservoirs; although, brackish and fresh groundwater provide supplemental and locally critical supplies. Response to drought varies across the region depending on the primary source of water and type of water use.

Severe drought has affected Region M in the period of record of the Water Availability Model (WAM) (1940 through 2000) as well as in the years since 2000. The drought record helps to understand the firm yield from the Amistad-Falcon Reservoir system, and if droughts after 2000 have been more severe that those encompassed by the model’s period of record, the firm yield is likely to be overestimated in the WAM.

Because of the unique mechanism for fulfillment of water rights of the Rio Grande system, and the heavy reliance on that source, drought impacts Region M somewhat differently than other regions. In addition, a significant portion of the water used in Region M comes from the Mexican side of the Rio Grande watershed.

Drought and other circumstances can contribute to a water shortage, which is any situation when there is less supply of water than there is demand for water. Shortages can be the result of low rainfall, operational decisions, higher than normal temperatures, or growing populations causing increased demand. Drought preparation and response can help to mitigate the impacts of these shortages by finding ways to reduce demands and supplement supplies in response to water shortages.

The Texas Division of Emergency Management submitted recommendations from the Drought Preparedness Council to all Regional Water Planning Groups (RWPGs) on August 1, 2019. The Council advised the RWPGs to follow the Texas Water Development Board (TWDB) template for this chapter and to develop region-specific model drought contingency plans for all water use categories in the region that account for more than 10 percent of water demands in any decade over the 50 year planning horizon. These recommendations have been considered in the development of this chapter.

This chapter consolidates the existing information on current drought preparation and response activities for Region M and makes recommendations where needed.

7.1.1 Current Drought of Record

The drought of record (DOR) is the basis of the firm yield projection for each surface water supply. The DOR identifies the worst drought during the period of record, and the firm yield is the supply that can be expected from that river or system in that most severe drought scenario. The Rio Grande WAM includes hydrologic information from 1940 through 2000.

The longest duration drought modeled for both the combined reservoir system and the US portion spans the 1960s: 12/1959 through 10/1971 for the combined storage belonging to the United States and Mexico (11 years, 10 months) and 6/1961 through 10/1971 for the US portion (10 years, 4 months).
The drought spanning from July of 1992 to the end of the modeled period includes the minimum storage events for both the United States and combined systems, and the extent of the model does not include the end of the drought. The duration shown (8 years, 5 months) is shorter than the 1960s drought but is not a complete record. Refer to Figure 7-1.

![Figure 7-1 Modeled Reservoir Storage for the Amistad-Falcon System, US and Combined](image)

The WAM takes into account inflows from both Mexican and US tributaries associated with the drought of record, volumes and locations of demands along the river, channel losses along the river, and other factors. The deliveries from Mexico are not modeled according to the 1944 treaty, which establishes 350,000 acre-feet/year to be delivered to the United States; the deliveries are modeled according to historical supplies and demands rather than assuming that the treaty obligation will be met in full each year. Firm yield decreases slightly each decade from reduced reservoir capacity due to sedimentation.

The hydrologic record in the Rio Grande WAM, including all of the drought periods discussed, is used to predict firm yield over the planning horizon, given in Table 7-1.

| Table 7-1 Firm Yield Projections, Amistad-Falcon Reservoir System 2020-2070 (Acre-feet/year) |
|-----------------------------------------------|----------------|----------------|----------------|----------------|----------------|----------------|
| Amistad-Falcon Reservoir System               | 1,060,616       | 1,059,260       | 1,057,903       | 1,056,547       | 1,055,191       | 1,053,834       |
Because the hydrologic data in the WAM extends only through the year 2000, more recent drought years are not considered in the determination of the DOR. The 2011 and 2016 Regional Water Plans (RWPs) recommended that the Rio Grande WAM should be regularly updated; this recommendation is the opinion of the current RWPG. Legislation passed in the 2019 session mandates and funds updating the naturalized flow records for the Rio Grande WAM through 2017, which will be available for use in development of the 2026 RWP update.

7.1.2 Potential Droughts of Record

The naturalized flow record that is used in the WAM is one way to evaluate the scale and duration of drought. That flow record extends only through 2000 in the Rio Grande WAM; severe droughts have occurred since then that are not currently evaluated in the WAM. Without a full naturalized flow record for comparison, it is difficult to know whether there has been a new DOR since 2000, but other measures and indicators of drought can be used to compare recent years with the historical record.

7.1.2.1 Drought Indices

Drought indices have been developed to assess the effects of drought through parameters, including severity, duration, and spatial extent. One of the first comprehensive efforts using precipitation and temperature for estimating a region’s moisture was the Palmer Drought Severity Index (PDSI). Index values range from up to 6, indicating wetter-than-normal conditions, and as low as -6 for severe drought. The PDSI includes values across the country through 2019, which makes it a valuable addition to drought analysis. Graphs for yearly PDSI values for Texas Climate Divisions 9 and 10 (Figure 7-2) show more recent and severe droughts in the 21st century than the drought of the 1950s, but over a shorter duration for Region M (Figure 7-3 and Figure 7-4).

Figure 7-4  Palmer Drought Severity Index for Division 10
7.2 CURRENT DROUGHT PREPARATIONS AND RESPONSE

7.2.1 Overview

All water user groups (WUGs) in Region M can prepare for drought by participating in the regional planning process, which plans for long-term supplies that are reliable for the DOR. The regional planning process attempts to meet projected water demands during a drought of severity equivalent to the DOR. Statewide, there have been increased efforts in recent years to establish both long-term drought management strategies to avoid shortages and Drought Contingency Plans (DCPs) to plan for temporary water supply shortages and other water supply emergencies.

The Texas Commission on Environmental Quality (TCEQ) requires that anyone applying for a water right, irrigation districts, wholesale public water suppliers, and all retail public water suppliers serving 3,300 connections or more submit a DCP to the TCEQ. Public water suppliers serving fewer than 3,300 connections are required to have a DCP on file but are not required to submit it to TCEQ. May 1, 2019, was the most recent deadline for DCP submittals.

All the entities that are required to submit a DCP, as well as all users of 1,000 acre-feet or more domestic, municipal, or industrial (DMI) surface water rights and 10,000 acre-feet or more of irrigation surface water rights, are required to submit a Water Conservation Plan (WCP) to TCEQ and TWDB.

Because of these requirements and recent drought conditions, many communities in the Rio Grande Region have addressed drought preparedness and water conservation planning. A complete list of the DCP and WCP that have been submitted to TCEQ at this time is shown in Table 7-2.

DCPs for retail or wholesale water suppliers are required to include the following:

- Specific, quantified targets for water use reductions;
- Drought response stages;
- Triggers to begin and end each stage;
- Supply management measures;
- Demand management measures;
- Descriptions of drought indicators;
- Notification procedures;
- Enforcement procedures;
- Procedures for granting exceptions;
- Public input to the plan;
- Ongoing public education;
- Adoption of plan; and
- Coordination with the RWPG.

7.2.2 Drought Response Triggers

Drought response varies from entity to entity, primarily between groundwater and surface water sources, and those who serve customers with raw water, and those who deliver treated water. For irrigation districts, which deliver raw surface water, the response to drought is largely determined by the Rio Grande water right system. For treated water suppliers, triggers are specific to their users’ demand in relation to treatment capacity, wellfield capacity, or the account balance on DMI water rights held.
7.2.2.1 Irrigation Districts

The TCEQ Rio Grande operating rules determine how the United States’ share of surface water stored in Amistad and Falcon Reservoirs is apportioned among water right holders in the Region M planning area. A 225,000 acre-foot storage pool within the reservoir is replenished at the beginning of each month for DMI water right accounts. After the DMI storage pool and reservoir operating requirements are met, Class A and B water rights, used primarily for irrigation and mining, are allotted what remains on their account balances if there is sufficient water in the reservoir. In the history of the Watermaster Program, the DMI reserves have always been replenished in full, but the water available annually for Class A and B water rights is often significantly less than the annual maximum authorization of those water rights. Class A and B water rights absorb the impacts of drought on the reservoir system by having less than 100 percent reliability.

Irrigation districts deliver a significant portion of the water used in the Lower Rio Grande Valley (Cameron, Hidalgo, Willacy, and Starr Counties) and Maverick County. The majority of Rio Grande water rights are delivered by irrigation districts. Farmers pay an annual flat rate assessment that entitles them to receive irrigation water on the basis of acreage. When an irrigation district crosses its drought trigger, it goes on water allocation. This means that the district’s available water is allocated to irrigation account balances as it becomes available.

Each water district has slightly different rules when on allocation; in some cases, water is allowed to be sold between farmers in their district, or farmers may consolidate their allocation on a portion of their land, leaving other areas for dry land farming. These measures allow farmers to adjust to anticipated water shortages.

A summary of the drought triggers and responses as listed by the irrigation districts that submitted DCPs at the time of writing is shown in Table 7-3.

### 7.2.2.2 Retail Public Water Suppliers

Although some cities rely on groundwater exclusively or groundwater comprises a part of their supply, most cities in Region M rely on surface water from the Rio Grande. Because municipal water rights have priority in the Amistad-Falcon Reservoir system, these water rights have historically been considered “guaranteed” in their full authorized diversion volume.

Those entities who deliver treated water generally developed triggers that were either based on the remaining municipal water rights available to the city for that year or the capacities of their treatment plants, so that high demands on the plants trigger a conservation stage. The conditions of the reservoirs are occasionally listed among triggers in public water supply DCPs but have little bearing on the
availability of municipal water. The conservation stages for cities included limitations on car washing and lawn watering, ranging from voluntary in early stages to some fines or other penalties in later stages.

A summary of the DCPs available for cities and water supply corporations at the time of writing is included as Appendix 7.A, and summary tables for some of the larger systems are shown in Table 7-4 through Table 7-9.

Stage 2

(1) Cameron County Irrigation District No. 2 or other irrigation districts provide notice to East Rio Hondo WSC that they will disallow farm irrigation water use within 60-90 days.
(2) Distribution system pressures fall below 35 pounds per square inch (psi) requirements for two consecutive days.
(3) East Rio Hondo WSC consumer demand exceeds 85% of East Rio Hondo WSC plan capacity for 15 days out of any consecutive 30 day period.
(4) Falcon and Amistad Reservoirs reach 15% of capacity as determined by TCEQ.

Customers shall be required to comply with the requirements and restrictions on certain nonessential water uses, such as irrigation, washing vehicles, and ornamental fountains and ponds.

Stage 3

(1) Major water line breaks, or pump or system failures occur, which cause loss of capability to provide water service.
(2) Natural or man-made contamination of the water supply source(s).
(3) Rapidly occurring low-pressure conditions (less than 20 psi) for any reason.

All requirements of Stage 2 shall remain in effect, except the following are prohibited: all irrigation of landscape, using water to wash any vehicle, and adding water to any type of pool.

<td>All Stage 1 restrictions in effect and any or all of the following restrictions: means and schedule of landscape irrigation restricted further; means and schedule of washing motor vehicles, boats, planes, etc., restricted; water use for golf courses based on water management plan; restaurants prohibited from serving water unless requested; all nonessential uses prohibited.</td>
</tr>
</tbody>
</table>
SOUTHERN MOST REGIONAL WATER AUTHORITY

Stage 3

(1) Levels of Amistad and Falcon reservoirs reach 15% or 504,600 acre-feet.
(2) Line breaks or system failures cause loss of service.
(3) Demands on Southmost Regional Water Authority distribution and/or WTP exceed capacity for 3 days.
(4) Contamination of water supply or distribution system causes loss of service.
(5) Inability to maintain or replenish water in storage for public health and safety.

4/24/2019

All Stage 1 and 2 restrictions and any or all of the following: means and schedule of landscape irrigation and residential car washing restricted further; water from hydrants limited to firefighting or other activities necessary to maintain public health and safety or for construction under special permit; filling swimming pools prohibited; operation of fountain or pond prohibited except for aquatic life; hydrant and sewer line flushing permitted only for emergency; use of water for scenic and recreational ponds and lakes prohibited.

Stage 4

(1) Line breaks or system failures cause loss of service.
(2) Contamination of water supply and/or distribution system.

All Stage 1, 2, and 3 restrictions remain in effect and any or all of the following: all landscape watering is prohibited; use of water for construction under special permit prohibited; washing of motor vehicles, boats, planes, etc., prohibited; filling of pools to a maintenance level is prohibited; water for maintenance level of fountains or ponds except to support aquatic life is prohibited. Water rationing can be initiated with any or all of Stage 4 restrictions.

<td>The following are prohibited: new service connections to the water system if another water source is already used, serving restaurant customers water when they do not ask for it, use of water for scenic and recreational ponds or lakes, use of water for pools, use of water to put new agricultural land into production, use of water for new planting or landscaping, and acceptance of applications for new or extended water service connections without approval by the city. Industrial and commercial users must implement an individual curtailment plan, and residential customers will receive a maximum monthly usage amount.</td>
</tr>
</tbody>
</table>
7.3  EXISTING AND POTENTIAL EMERGENCY INTERCONNECTS

7.3.1  Information Collection Methodology

In accordance with Texas Administrative Code (31 TAC 357.42(d)), the RWPG has collected high-level information on existing interconnects. Most water users in Region M are located along the Rio Grande or along canals that convey Rio Grande water. In a sense, the region is highly interconnected.

The distribution system for raw Rio Grande water includes the reservoir system and the 27 Irrigation districts, many of which are either interconnected or have high potential to be connected. The RWPG has reached out through representatives of the Lower Rio Grande Valley Water District Managers Association to the district managers for information about interconnects between raw water systems.

Municipal utilities supplying treated water to retail customers are becoming more interconnected across the region. To evaluate current connections between systems, the Region M Planning Group appointed a member to evaluate information about existing interconnects.

7.3.2  Local Drought Contingency Plans with Emergency Interconnects

Although utilization of emergency interconnects was not included in the DCPs that were reviewed, Table 7-10 shows the known interconnections between public water supply systems and whether the connections are used for regular service or only in emergencies. Detailed information about these interconnections was submitted securely to the Executive Administrator of the TWDB.

7.4 **EMERGENCY RESPONSES TO LOCAL DROUGHT CONDITIONS OR LOSS OF MUNICIPAL SUPPLY**

Municipal WUGs that are of concern for emergency drought response are identified as those that have a population of 7,500 or less and have a sole source of water, even if that water is provided by a wholesale water provider, or in the case of the Rio Grande region, if those entities receive waters from the Rio Grande from multiple irrigation districts. Additionally, all “county-other” WUGs are considered.

WUGs that meet these criteria are shown in Table 7-11, with the 2010 census population and current suppliers. Most of these districts rely exclusively on water from the Rio Grande system and have no secondary source available to them (the districts that provide Rio Grande surface water are listed as the “Current Supply”). Those that indicate their sole supply is groundwater are generally geographically constrained and limited to local groundwater supplies.

### 7.4.1.1 Sole Source: Surface Water

Entities that depend entirely on surface water in Region M are very common. If shortages occur as a result of having insufficient water rights to meet demand or to deliver water, there is a water market and provisions that allow for entities to purchase water. Special provisions enable purchase of emergency water. It is recommended that all WUGs procure sufficient water rights or long-term contracts to meet projected demands when feasible. Additionally, access to off-channel storage reservoirs or additional sources of water (groundwater, reuse, etc.) for sole-source utilities may provide increased resilience.

**Interconnections**

Interconnections between utilities build greater resilience by providing utilities an alternate source of treated water if either system is damaged or fails. Entities that experience push-water requirements when irrigation deliveries are curtailed may also benefit from both raw and treated water interconnects, which could allow districts and utilities to coordinate and consolidate deliveries in a limited number of canals.

**Water Quality**

Any emergency that impacts the quality of the water in the Rio Grande has the potential to cause significant harm to the region. Because contamination could be released from either the US or Mexican side of the river, there is an additional level of uncertainty regarding potential contaminants. In the past, there have been releases into Rio Grande tributaries that were identified only by a widespread fish kill.
No emergency response plan is currently in place to handle the release of contaminants into the Rio Grande.

A release in April of 2014 on the Rio Salado (a Rio Grande tributary in Mexico) was identified by the Mexican counterpart to the International Boundary and Water Commission (IBWC), the Comisión Internacional de Límites y Aguas, which reported that a release had occurred, but the quantity and the material were unknown. Later information showed that the release was on April 8, but the notification was not until April 30.

TCEQ conducted testing on the Rio Grande upstream and downstream of the inflows from the Rio Salado, which took 5 days to analyze. In this case, the results of broad-spectrum pollutant analysis showed that there were no contaminants that could endanger human health, and other contaminants of concern such as heavy metals were beneath federal and state limits for drinking water. However, this incident drew attention to the lack of emergency plan for the region.

Regular water quality testing and reporting is already in place in some locations to alert farmers of high total dissolved solids in the river. This type of system could be expanded upon to provide regular reports of water quality to utility managers and agencies such as IBWC and TCEQ. This kind of water quality analysis is complicated by the fact that the potential contaminants are not known in many cases. Understanding the timing of contaminant transport through the system could allow entities to pump enough water to fill reservoirs before the contaminant has reached that location. However, the success of this approach is contingent on timely information about releases. At a minimum, information must be communicated to utilities and to the public in an accurate and timely manner so that safe drinking water can be provided immediately.

**Recommendations**

Long-term recommendations for entities that rely solely on surface water include expansion of alternate water supplies, including fresh and brackish groundwater where available. Emergency recommendations are listed in Table 7-12.

EMERGENCY SHORTAGE | RESPONSES
--- | ---
Rio Grande Contamination | Immediate testing. Pumping and storage of safe water to any existing storage facilities. Interconnects with systems that have alternate supplies. Truck in water. Emergency communication with boil water or other guidance to customers. Highest stage drought restrictions. Long term: emergency response plan including communications, provision of safe water to critical facilities, etc.

7.4.1.2 Sole Source: Groundwater
Utilities that depend exclusively on groundwater tend to be isolated from other sources and other cities. For instance, Hebbronville is over 30 miles from the nearest city, Falfurrias. For entities that are dependent on groundwater, the entities are encouraged to actively monitor water levels in wells, especially in high-demand periods. Water levels can be used to trigger drought responses, and to guide expansion of wellfields or deepening of wells. Additionally, groundwater quality may be an indicator of decreasing availability from a well or wellfield.

Emergency responses for entities that rely solely on groundwater are shown in Table 7-13.

7.5 REGION-SPECIFIC DROUGHT RESPONSE RECOMMENDATIONS AND MODEL DROUGHT CONTINGENCY PLANS

The drought response recommendations made for each water source in the following subsections should be considered in the development of drought response preparations. Model DCPs and WCPs are included for all WUG types in Appendix 7.B.

7.5.1 Amistad-Falcon Reservoir System Drought Response Recommendations

Water supplies from the Amistad-Falcon reservoir system are managed with a unique operating and water rights system, which reserves a significant portion of the reservoir to effectively guarantee DMI water rights and fills irrigation and mining water right accounts as water is available to that storage pool.

This system ensures that, even in the worst recorded drought, a WUG may divert its full annual authorized diversion each year. If a WUG has sufficient water rights to meet its needs, and a reasonable means of delivering the water from the diversion point to the point of need, there should be no issues getting that water in a year similar to the DOR.

Water shortages among municipal WUGs can result from a range of scenarios (discussed in Subsection 7.2.2) including insufficient water rights, issues with water rights account budgeting, delivery issues, and water treatment or storage issues. The primary impact of drought on municipal utilities that rely on the Amistad-Falcon reservoir system is an increase in demands, and not a reduction of supplies.

7.5.1.1 DMI Water Rights Holders

Cities and industrial users in Region M experience drought under the following scenarios, described in Table 7-14 with recommendations specific to each.

Table 7-14 Municipal Shortage Scenarios and Recommendations

<table>
<thead>
<tr>
<th>SHORTAGE SCENARIO AND TRIGGERS</th>
<th>RECOMMENDED RESPONSES</th>
</tr>
</thead>
</table>
| **Insufficient water rights to meet demand.** An entity may have sufficient treatment capacity to meet its demands but have insufficient water rights to meet drought year demands. Triggers should be based on useable balance calculations and monthly/weekly demand projections. When the balance of water available for the remainder of the year does not exceed the demand projections by a reasonable margin, severe drought response should be implemented. When the projected demands exceed the balance of water, critical drought response should be implemented. | **Best Practices:** Use of water rights should be managed carefully, and cities should track their useable balance over the year compared with seasonal/monthly demand projections. This will allow a city to implement conservation measures early in the year to stay within its water budget. It is recommended that any city that projects a shortage should purchase water rights when feasible.  
**Severe Conditions:** Request voluntary municipal and industrial conservation, limit unnecessary municipal usage, consider billing rate incentives for conservation in severe drought periods, and purchase water as it is available.  
**Critical Conditions:** Implement mandatory municipal and industrial water use restrictions, restrict nonessential municipal water use, consider billing rate incentives for conservation in critical drought periods, and purchase water as it is available. |
### Shortage Scenario and Triggers

**Water treatment plant capacity.** Municipal utilities with sufficient water rights may experience a shortage if, during their peak demand months, the capacity of the WTP is not sufficient to meet permit requirements. Triggers should be based on daily treatment volumes and TCEQ WTP capacity rules. When 85% capacity is reached for three consecutive days, severe drought response should be implemented. When 95% capacity is reached, critical drought response should be implemented.

<table>
<thead>
<tr>
<th>RECOMMENDED RESPONSES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Best Practices:</strong> Conservation programs can reduce demands on the WTP. The long-term solution is expansion of WTPs’ capacity and interconnections with other facilities.</td>
</tr>
<tr>
<td><strong>Severe Conditions:</strong> Request voluntary municipal and industrial conservation, limit unnecessary municipal usage, consider billing rate incentives for conservation in severe drought periods, and utilize emergency interconnects.</td>
</tr>
<tr>
<td><strong>Critical Conditions:</strong> Implement mandatory municipal and industrial water use restrictions, restrict nonessential municipal water use, consider billing rate incentives for conservation in critical drought periods, and utilize emergency interconnects.</td>
</tr>
</tbody>
</table>

**Push water.** Even with sufficient water rights to meet demands and to cover normal delivery losses, some municipalities, especially those who receive surface water from irrigation districts that serve mostly irrigation water users, may need additional water to meet minimum operational requirements in the district conveyance system if irrigation water is curtailed. Triggers should be based on (1) the requirement of irrigation water to deliver DMI water in a given district, (2) the useable balance available to irrigators in the district, and whether those irrigators are on allocation, and (3) the storage capacity available to the utility. Severe drought restrictions should be implemented if stored water is at or within a small margin of the projected demands before the next feasible delivery from the district. Critical drought restrictions should be implemented if water in storage is less than the projected demands before the next feasible delivery from the district.

<table>
<thead>
<tr>
<th>RECOMMENDED RESPONSES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Best Practices:</strong> First, utilities should have a clear communication plan in place with the irrigation district that alerts the city when irrigation water users may be put on allocation. This may include a drought trigger associated with Amistad/Falcon reservoir storage levels and the useable balance of irrigation accounts in the district. Second, utilities should evaluate their current conveyance methods to see if there are alternate canals or districts that may be able to serve their systems in the case of a push water shortage. Third, where possible, entities should increase their raw water storage to allow for more time between deliveries that need to be timed to coincide with irrigation deliveries. Last, interconnections and emergency agreements with other utilities and other sources are recommended.</td>
</tr>
<tr>
<td><strong>Severe Conditions:</strong> Request voluntary municipal and industrial conservation, limit unnecessary municipal usage, consider billing rate incentives for conservation in severe drought periods, utilize emergency interconnects, and identify water that may be available for purchase as push water.</td>
</tr>
<tr>
<td><strong>Critical Conditions:</strong> Implement mandatory municipal and industrial water use restrictions, restrict nonessential municipal water use, consider billing rate incentives for conservation in critical drought periods, utilize emergency interconnects, and identify water that may be available for purchase as push water.</td>
</tr>
</tbody>
</table>
7.5.1.2 Irrigation and Mining Water Rights Holders
Farmers can respond to drought through planning, crop selection, highly efficient operations, and on-farm demand reduction strategies (such as narrow border citrus and drip irrigation). Farmers and irrigation districts should maintain useable balance calculations and monitor reservoir levels to facilitate planning. Selection of crops, in conjunction with available demand reduction strategies, can allow farmers to maximize their yield in years of drought. Crop selection tools that take current costs and market values into account have been made available to farmers in the High Plains and could be updated with information specific to the region.

Cooperation with the irrigation districts to increase the operational and conveyance efficiency could yield a significant amount of water to farmers. This is discussed as a water management strategy in Chapter 5.

Mining water use, including oil and gas drilling, can be decreased by close controls of leaks and spills, on-site reuse, and new technology or approaches that require less water. Because mining water rights are subject to the same decrease in reliability in drought years, mining water users are highly encouraged to identify and implement water conservation measures. Both irrigation and mining water demand can be scaled according to available water, and alternate sources, such as reuse or groundwater, may be used when surface water is scarce.

7.5.2 Groundwater Supply Drought Response Recommendations
Many users in Region M rely on groundwater as their main source of supply. The aquifers and subsections of aquifers within Region M exhibit a broad range of drought response characteristics, which require specific drought triggers and responses to be developed for each situation. In general, groundwater wells may be impacted by increased pumping in the area and by decreasing recharge resulting from drought. Insufficient groundwater or groundwater of acceptable quality may result in a shortage.

For general drought preparedness, wells should regularly be monitored for changing water levels and changes in quality. If required, additional temporary treatment may need to be implemented to meet drinking water standards. It is important to understand what temporary treatment options may be used in the case of a shortage. Additional wells and emergency rehabilitation or deepening of existing wells can help to increase supplies in a shortage.

Under severe conditions, established when supplies may be insufficient to meet demands within 60 days or decrease in well productivity or quality, it is recommended that city utility managers request voluntary municipal and industrial conservation, limit unnecessary municipal usage, consider billing rate incentives for conservation in severe drought periods, and utilize any available emergency interconnects.

Under critical conditions, established when demands are expected to exceed supplies within 30 days, it is recommended that city utility managers implement mandatory municipal and industrial water use restrictions, restrict nonessential municipal water use, consider billing rate incentives for conservation in critical drought periods, and utilize emergency interconnects. In the most extreme cases, trucking in water may be the best alternative to meet immediate needs.
7.6  DROUGHT MANAGEMENT WATER MANAGEMENT STRATEGIES

Drought water management strategies (WMS), such as voluntary or mandatory drought water restrictions, are those which are intended to be implemented only in times of drought. While conservation as a whole may be implemented as a long-term strategy, the ability of a WUG to reduce demands in times of severe water shortage can enable reliable delivery of water at levels that maintain near-term health and safety.

It has been demonstrated across the state that municipal WUGs that focus on reducing discretionary outdoor water use first in response to drought and avoid water use reductions in the commercial and manufacturing use sectors may find drought management to be economically viable and cost-competitive with other WMS. Drought WMS may be economically viable as an interim strategy to meet near-term needs through demand reduction until such time as economically viable long-term water supplies can be developed. For planning purposes, it is important that a utility understand the amount of demand reduction that can be expected when drought restrictions are put in place.

All WMS are discussed in more detail in Chapter 5.

7.6.1  Drought Management WMS Considered

The drought management WMS that were considered for Region M included conservation strategies intended to reduce demand or reduce losses and the development of new supplies, which is intended to make the region more resilient to drought. Drought management WMS that were evaluated for all possible WUGs include the following:

- Municipal Drought Management. Water demand reductions, by voluntary or mandatory restrictions, were considered for all municipal WUGs with needs in drought years.

- On-Farm Irrigation Conservation. This strategy is categorized as water management practices, land management systems, and on-farm water delivery systems. However, farming practices considered as drought management WMS include water budgeting, fallowing and consolidating available water supplies, crop selection for low water use, and dry year option contracts.

7.6.2  Recommended/Alternative Drought Management WMS and Triggers

7.6.2.1  Municipal Drought Management WMS

Water demand reductions, by voluntary or mandatory restrictions, were recommended for all municipal WUGs with needs. The RWP is representative of the worst historical drought conditions, and municipal water utilities in Region M and across the state have successfully integrated water demand reduction into their DCPs as a way to respond to drought. Subsection 7.2.2.2 includes examples of drought triggers and responses from municipal water utilities in Region M.

The RWPG has determined that 5 percent demand reduction is an attainable demand reduction for any utility with needs in a drought year. This reduction has been applied to all municipal WUGs with needs.
7.6.2.2 On-Farm Irrigation Conservation

The recommended WMS for on-farm conservation are divided into three categories: water management practices, land management systems, and on-farm water delivery systems. However, farming practices considered as drought management WMS could include water budgeting, fallowing and consolidating available water supplies, crop selection for low water use, and dry year option contracts, which are not specifically included in the on-farm conservation WMS.

Farmers and irrigation districts should maintain useable balance calculations and monitor reservoir levels to facilitate planning. Selection of crops, in conjunction with available demand reduction strategies, can allow farmers to maximize their yield in years of drought. Crop selection tools that take current costs and market values into account have been made available to farmers in the High Plains and could be updated with information specific to the region. Triggers may need to be specific to the irrigation district or the farmer, depending on specific water needs, but should be tied to reservoir levels and water right account balances.

These practices are common and represent the region’s response to unmet needs for irrigated agriculture in previous RWPs. An estimated 10 percent reduction in irrigation water demand is applied to all irrigation WUGs with needs.

7.6.3 Drought Management WMS Not Recommended

An approach to water marketing known as "dry year option contracts" or "water supply option contracts" (WSOC) may reduce the impact on agricultural production while providing drought supplies for other uses. This concept involves temporary transfers of irrigation water to provide secure water supplies to non-agricultural users during droughts. This option would transfer water to other users when needed while preserving the water for agriculture during normal water supply situations. In Texas, WSOC is a practice in the Edwards Aquifer area to provide water for endangered species and San Antonio water users during drought.

The Lower Rio Grande Valley and Region M have some unique institutional, hydrologic, and economic conditions that would need to be addressed to provide seller and buyer incentives to enter into a WSOC. Unlike many other areas of the Western United States, water rights are held by the irrigation districts rather than farmers. Given this and the generally low price of agricultural water, farmers have little incentive to conserve water except in drought and lack the ability to sell water conserved by more efficient irrigation methods or fallowing land such as for WSOC payments. While the potential exists for irrigation districts to enter into a WSOC with another user, irrigation districts would need to work with farmers and pass through exercise payments to make WSOCs feasible from the farmer’s point of view. In addition, with the generally low cost of irrigation district water, the purchase of this water may be the lowest cost to urban providers and other users compared to alternative sources such as desalination or reuse.

Urban demand has the highest priority in drought conditions, and therefore, urban communities may feel little need to have WSOCs unless there is concern about the agricultural community and/or irrigation district welfare. This strategy would require significant legislative changes and is not recommended at this time.
7.7 OTHER CONSIDERATIONS AND RECOMMENDATIONS

7.7.1 Relevant Recommendations from Drought Preparedness Council

In a letter addressed to all the RWPGs of Texas dated August 1, 2019, the Drought Preparedness Council recommended developing region-specific model DCPs for all water use categories that account for more than 10 percent of water demands in any decade over the 50 year planning horizon. As detailed in the TWDB (refer to Table 7-15), irrigation and municipal WUG water use categories for Region M accounted for more than 10 percent of water demands in all projected decades. Therefore, model DCPs have been developed for irrigation and municipal WUG water use categories and are discussed in Subsection 7.2.2.

7.7.2 Other Drought Management Measures

Livestock water supplies are from both groundwater and surface water in Region M. In a drought scenario, it is important that windmill pumps that fill stock ponds and tanks be used only when needed, rather than allowed to run at all times. Agricultural and livestock demands may be significantly increased in severe drought, which can impact groundwater supplies. In addition to careful management of water
supplies, drought relief programs may be pursued to assist with livestock demands in a severe drought, including the emergency Haying and Grazing Program.

### 7.7.3 Recommendations Regarding the Drought Preparedness Council and State Drought Preparedness Plan

The 2019 Texas Legislature and Governor Abbott greatly expanded the TWDB’s role in flood planning and financing. In addition to existing flood programs, the TWDB will be administering new state and regional flood planning process with flood planning regions based on river basins. The regional flood planning process will be developed and initial regional flood planning groups formed by mid-2020; the first regional flood plans will be due in 2023, and the first state flood plan will be due September 1, 2024.

The legislature has allocated funds to collect flood-related data, support river and coastal modeling capabilities, distribute critical flood information, and create a new flood funding program to be administered by the TWDB. The funding program will be designed to make the implementation of drainage and flood projects more affordable for Texas communities and to meet immediate needs for funding. The funding will become available in 2020.
APPENDIX 7.A
DROUGHT CONTINGENCY PLAN SUMMARY
<table>
<thead>
<tr>
<th>BASIS OF DROUGHT</th>
<th>TRIGGERS:</th>
<th>ACTIONS:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage 1</td>
<td>a) US waters of the Amistad and Falcon reservoirs is equal to or less than 40% storage capacity, b) any of the WTPs are operating at or above 65% total daily capacity for 3 consecutive days, c) water system pumps are operating at or above 65% total daily capacity for 3 consecutive days</td>
<td>Customers are required to follow a certain schedule in order to: irrigate landscapes, wash vehicles, add water to pools, and irrigate golf courses/parks/greenbelt. The following are prohibited: operating ornamental fountains unless required to support aquatic life or if recirculation is used, use of water from hydrants or flush valves unless required to maintain public health, safety, and welfare, washing down hard-surfaced areas or structures, use of water for dust control, permitting water to run into any gutter or street, failure to repair controllable leaks within a reasonable period of time, any waste of water.</td>
</tr>
<tr>
<td>Stage 2</td>
<td>a) US waters of the Amistad and Falcon reservoirs is equal to or less than 30% storage capacity, b) any of the WTPs are operating at or above 75% total daily capacity for 3 consecutive days, c) water system pumps are operating at or above 75% total daily capacity for 3 consecutive days</td>
<td>Customers are required to follow a certain schedule in order to: irrigate landscapes in a hand-help watering manner, wash vehicles, and add water to pools. The following are prohibited: irrigating landscapes with a sprinkler, irrigating gold courses/parks/greenbelt, operating ornamental fountains unless required to support aquatic life or if recirculation is used, use of water from hydrants or flush valves unless required to maintain public health, safety, and welfare, washing down hard-surfaced areas or structures, use of water for dust control, permitting water to run into any gutter or street, failure to repair controllable leaks within a reasonable period of time, any waste of water.</td>
</tr>
<tr>
<td>Stage 3</td>
<td>a) US waters of the Amistad and Falcon reservoirs is equal to or less than 25% storage capacity, b) any of the WTPs are operating at or above 85% total daily capacity for 3 consecutive days, c) water system pumps are operating at or above 75% total daily capacity for 3 consecutive days</td>
<td>Customers are required to follow a stricter schedule in order to irrigate landscapes in a hand-help watering manner. The following are prohibited: washing vehicles, adding water to pools, irrigating landscapes with a sprinkler, irrigating gold courses/parks/greenbelt, operating ornamental fountains unless required to support aquatic life or if recirculation is used, use of water from hydrants or flush valves unless required to maintain public health, safety, and welfare, washing down hard-surfaced areas or structures, use of water for dust control, permitting water to run into any gutter or street, failure to repair controllable leaks within a reasonable period of time, any waste of water. No applications for any new or expanded water service connections will be approved.</td>
</tr>
</tbody>
</table>
Stage 4

a) US waters of the Amistad and Falcon reservoirs is equal to or less than 20% storage capacity, b) any of the WTPs are operating at or above 90% total daily capacity for 24 consecutive hours, c) water system pumps are operating at or above 90% total daily capacity for 24 consecutive hours, d) an immediate reduction in water use is required to protect the public health and safety and/or integrity of the water system.

The following are prohibited: irrigation of landscaped area, all outdoor use of water, washing vehicles, adding water to pools, irrigating gold courses/parks/greenbelt, operating ornamental fountains unless required to support aquatic life or if recirculation is used, use of water from hydrants or flush valves unless required to maintain public health, safety, and welfare, washing down hard-surfaced areas or structures, use of water for dust control, permitting water to run into any gutter or street, failure to repair controllable leaks within a reasonable period of time, any waste of water. No applications for any new or expanded water service connections will be approved.

City of Alamo, 3/28/2014
| Stage 4 | Daily water use equals or exceeds 120% of treatment capacity for 3 consecutive days and/or the reservoir levels continually recede on a daily basis and remain below 50% capacity for 24 consecutive hours, and/or water pressure below 20 psi occurs in distribution system and the City Manager determines such conditions are a hazard to public health and safety. |
| Stage 4 Actions | City to reduce or discontinue flushing of water mains and irrigation of public landscaped areas, as well as use alternative supply sources. All requirements from Stage 2 and 3 except: schedule and means further restricted for landscape irrigation and washing of motor vehicles; use of water for swimming pools prohibited; no applications for new, additional, or expanded water connections, meters, lines, etc. shall be approved. |

| Stage 5 | 1. Major water lines break, or pump or system failures occur, which cause unprecedented loss of capability to provide water service; or 2. Natural or man-made contamination of the water supply source(s). |
| Stage 5 Actions | City to discontinue flushing of water mains, fire hydrants, and irrigation of public landscaped areas. All requirements from Stages 2, 3, and 4 except: irrigation of landscaped areas and use of water to wash motor vehicles is absolutely prohibited. Stage 6 - Water allocation according to water allocation plan. |

**Brownsville Public Utilities Board, 4/24/2019**

**BASIS OF DROUGHT**

**TRIGGERS:**

- Automatically initiated on May 1 of each year and for any of the following: a) TCEQ Rio Grande Watermaster advises that a water shortage is possible due to low levels in Amistad and Falcon reservoirs, b) level of US' water in Amistad and Falcon reservoirs reaches 51%, c) line break, pump, or system failure may result in unprecedented loss of capability to provide service, or d) peak demand on the distribution system and/or treatment plants is nearing capacity limits

**ACTIONS:**

- Customers shall be requested to voluntarily conserve water and adhere to the prescribed restrictions on certain water uses.

</tr>
<tr>
<td></td>
<td><strong>Harlingen Waterworks System 6/15/2015</strong></td>
<td></td>
</tr>
</tbody>
</table>
**Stage 1**

When three or more of the following criteria are met:
1) City reservoir levels = 43' MFR & 40' DTW and falling,
2) Rio Grande River flows = 13.0 cm/s,
3) PDSI = moderate drought (-2.0 to -2.9),
4) Water demand = 70% of WTP Capacity (26.2 MGD)

Customers are requested to voluntarily conserve water by limiting the irrigation of landscaped areas and minimize water use for non-essential purposes. All operations of Harlingen Waterworks System shall adhere to water restrictions prescribed for Stage 2.

**Stage 2**

When three or more of the following criteria are met:
1) City reservoir levels = 42' MFR & 39' DTW and falling,
2) Rio Grande River flows = 12.0 cm/s,
3) PDSI = severe drought (-3.0 to -3.9),
4) Water demand = 80% of WTP Capacity (26.2 MGD)

Irrigation of landscape not by use of a hand-held hose, bucket, or drip irrigation shall be on a schedule based on location. Automobile washing not at a commercial facility will be limited to the irrigation schedule and will only be permitted with a hand-held bucket or hose with shut off nozzle. Use of water from fire hydrants will only be allowed for fire fighting or activities to maintain public health, safety, and welfare without a special permit. Golf course irrigation will only be allowed between 11pm and 6am.

**Stage 3**

When three or more of the following criteria are met:
1) City reservoir levels = 41' MFR & 38' DTW and falling,
2) Rio Grande River flows = 11.0 cm/s,
3) PDSI = extreme drought (-4.0 or less),
4) Water demand = 90% of WTP Capacity (26.2 MGD)

The schedule for landscape irrigation is limited further. Use of water to fill pools is only allowed on watering days. Operation of ornamental fountains will only be allowed if they are necessary to sustain aquatic life or equipped with recirculation system. Only greens and tees on golf courses may be watered. Restaurants may only serve water to their customers when it is requested. The following are prohibited: wash down of sidewalks, walkways, driveways, parking lots, tennis courts, or other hard surfaces; wash down of buildings or structures; use of water for dust control; flushing gutters or permitting water to accumulate in a gutter or street; failure to repair a controllable leak within a reasonable period of time.

**Stage 4**

All four of the criteria of Stage 3 are met; a major pipeline breaks or pump system failure occurs which causes unprecedented loss of capacity to provide water service; or contamination of the water supply

The following are prohibited: all outdoor use of water (including irrigation) except for the direct need to protect the health, safety, and welfare of the public; washing automobiles; filling pools; operation of ornamental fountains unless necessary to sustain aquatic life. The General Manager is authorized to deny any new or expanded water connections, pipeline extensions, etc.

---

**BASIS OF DROUGHT TRIGGERS:**

Storage in Amistad-Falcon Reservoir system, water use compared with system capacity, utility's amount of water in storage, treatment or delivery failures, high demand periods like holidays.

**TRIGGERS:**

Voluntary conservation is the first stage. It is always in effect unless a higher stage is required and enacted.

**Laguna Madre Water District, 3/3/2019**

**ACTIONS:**

Voluntary Water Use Restrictions:
1. Recommend that all landscape areas be irrigated on a twice per week or less schedule and that such irrigation occur from midnight through 7 am or other schedules as determined from the General manager;
2. Recommend water customers to discontinue water use for non- essential purposes such as washing any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard surface areas.
Stage 2

1. When the level of U.S. water stored in Amistad and Falcon Reservoirs reaches 51% or 1,660,000 AF (or below). When the level of water is above this amount, this phase is terminated. 2. Average daily water use is approaching 90% of system capacity. 3. Net storage in District’s raw water reservoirs are at 75% and is continually decreasing on a daily basis such that a more serious problem may develop, 4. The availability of raw water is low. 5. The availability of water rights based on quarterly capacity: 1st - 20%, 2nd-40%, 3rd-70%. 6. The capacity to transport and/or treat raw water has been affected. 7. The distribution capacity to customers is approaching a maximum. 8. The reservoir III level at WTP #2 is at 7 feet and dropping.

Stage 3

1. During peak demand days such as Texas Week, Easter, Memorial Day, and Labor Day. 2. When the level of US water stored in Amistad and Falcon Reservoirs reaches 25% or 834,600 AF (or below). When the level of water is above this amount, this phase may be terminated. 3. Net storage in District’s raw water reservoirs is at 50% and is continually decreasing on a daily basis such that a more serious problem may develop. 4. The availability of raw water is low. 5. The availability of water rights based on quarterly capacity: 1st-22%, 2nd-46%, 3rd-81% 6. During Spring Break (Texas Week) landscape irrigation will be restricted from 9am the Friday before the actual date of Spring Break through Monday at 9am. Peak demands on other Holidays falling on a Tuesday, Wednesday, or Thursday will have restrictions beginning at 9am a day before the holiday and ending a day after at 9am. Holidays falling on Friday thru Monday will have restrictions beginning on Friday 9am and end on Monday at 9am. 2. Landscape irrigation will be permitted on designated water days. Landscape irrigation with a hand-held garden hose, soaker hose, hand-held bucket or water can, no more than 5 gallons capacity or drip irrigation. Landscape irrigation time will be 7pm to 7am. 3. Commercial nurseries and other similar establishments will have these water restrictions: hand-held buckets or water cans from 7pm - 7am, drip or sprinkler irrigation systems from 7pm-7am. 4. Water use for non-essential purposes is prohibited. 5. Permitting or maintaining defective plumbing in a home or business is prohibited. 6. Operation of any outdoor ornamental fountain or pond for aesthetic or scenic purposes is prohibited, except where necessary to support aquatic life or where such fountain or ponds are equipped with a water recirculation system. 7. Landscape irrigation variances are available but customers need to apply by mail. Facsimile, or email their name, address where the new landscape is to be installed, and the date of installation
### Stage 4
1. When the level of US water stored in Amistad and Falcon Reservoirs reaches 15% or 504,600 AF (or below).
2. When a condition related to unexpected circumstances, such as a major problem on the water system due to natural disaster or unanticipated restriction on the raw water delivery system that immediately diminishes the LMWD’s ability to deliver a normal water level.
3. Net storage in district’s raw water reservoirs is at 25% and is continually decreasing on a daily basis such that a more serious problem may develop.
4. Water demand is exceeding the system’s capacity on a regular basis.
5. Rio Grande River level is so low that the River Pumps cannot pump the daily raw water demand.
6. All raw water is being pumped from District’s Storage Reservoirs and all replenishment of raw Water Reservoirs has stopped.
7. The availability of water rights based on quarterly capacity: 1st-24%, 2nd-50%, 3rd-89%.
8. Contamination of the water supply and/or transmission and distribution system due to hurricanes, freezes and/or other natural disasters or man-made cause may result in extraordinary loss of capability to provide service.
9. The alternative water source for the LMWD is to purchase “water” from another system or from a retail entity.
10. Water use for non-essential purposes is prohibited, including landscape water irrigation, washing of mobile vehicles, watering of golf courses, use of fountains.
11. The use of fire hydrants for any purpose other than fire fighting is prohibited.
12. Industrial customers are required to implement an individual water conservation plans. The plans are subject to approval by the Water District’s General manager and/or his designee.

### BASIS OF DROUGHT

**TRIGGERS:**
- Water demand/WTP capacity, reservoir level

**Actions:**
- Customer are asked to voluntarily reduce their water usage and the following are prohibited: allowing irrigation water to run off into a gutter, ditch, drain, street and failure to repair a controllable leak.
| Stage 2 | a) WTP flow is at 85% capacity for 3 consecutive days, b) Amistad reservoir level reaches 25% capacity | All requirements for stage 1 remain in effect and the following are only allowed during certain scheduled times: irrigation with sprinkler systems, washing of vehicles, adding water to pools, irrigating parks/plazas/squares. The following are prohibited: operating any ornamental fountain or similar structure without a recycling system and washing paved areas, except to alleviate immediate fire hazards. |
| Stage 3 | a) WTP flow is at 90% capacity for 1 day, b) Amistad reservoir level reaches 20% capacity | All requirements for stage 2 remain in effect, except the schedules to use water for certain activities are even stricter and irrigating athletic fields is also held to a certain schedule. No bulk water sales will be made by the City when the water will be transported outside of the City except for domestic/residential/livestock use. Fire hydrant water sales shall cease. |
| Stage 4 | a) WTP flow is at 95% capacity for 1 day, b) Amistad reservoir level is less than 20% capacity | All requirements for stage 3 remain in effect and no applications for new or expanded water service connections will be approved with permission from the Utilities Director, water delivered to non-essential industrial and commercial customers will be reduced, and a maximum monthly water use allocation may be established for residential customers. The following are prohibited: irrigation, washing vehicles, adding water to pools. |

**BASIS OF DROUGHT**

<table>
<thead>
<tr>
<th>City of Lyford, 7/24/2000</th>
</tr>
</thead>
</table>

**TRIGGERS:**

- Falcon and Amistad conservation level between 51% and 26% or flow capacity at 90% for 5 consecutive days. Cumulative reduction goal is 5%.

**ACTIONS:**

- Customers are requested to voluntarily limit the amount of water used to that amount absolutely necessary for health, business, and irrigation.
- The following uses are prohibited: Allowing irrigation water to run off into a gutter, ditch, or drain; and failure to repair a controllable leak.
**Stage 2**
Falcon and Amistad conservation level between 25% and 20% or flow capacity at 95% for 5 consecutive days. Cumulative reduction goal is 10%.

All elements of Stage 1 remain in effect except that:
1. Irrigation utilizing hose-end sprinkler systems for lawns, gardens, landscaped areas, trees, shrubs, and other plants is prohibited except during designated hours of 6am to 8am and 8pm to 11pm. Customers with an address east of Hwy 77 are only allowed to water between designated hours on M, W, F. Customers with an address west of Hwy 77 are only allowed to water between designated hours on T, Thr, Sat. Exception: commercial nurseries, sod farmers, and similar establishments are exempt but requested to curtail all nonessential water use.
2. The washing of mobile vehicles and equipment is prohibited except on designated hours between 6am and 8am and 8pm to 11pm on same days designated above. Exception: washing can be done on premises of a commercial carwash or service station and for cleaning of garbage trucks and vehicles to transport food and perishables.
3. The refilling or adding to residential swimming and/or wading pools is prohibited except on designated hours between 8pm to 8am on designated days above.
4. The operation of any ornamental fountain or other structure making similar use of water is prohibited except for those with a recycling system.
5. The use of water for irrigation of parks, plazas, and squares is prohibited except between 8pm to 8am. The irrigation of golf course fairway areas is absolutely prohibited.
6. Essential and utility Use: Fire fighting-no restrictions; medical use by care facilities -no restrictions; Utility-reduction of average system pressure to 60 psi recommended, leak detection and system repairs recommended, stabilizing and equalizing system pressure recommended.

**Stage 3**
Falcon and Amistad conservation level between 20% and 15% or flow capacity at 95% for 5 consecutive days. Cumulative reduction goal is 15%.

All elements of Stage 2 shall remain in effect except that: 1. irrigation utilizing hose-end sprinklers or automatic sprinkler systems for lawns, gardens, landscaped areas, trees, shrubs, and other plants is prohibited except during designated hours of 6am to 8am and 8pm to 11pm. Customers east of Hwy 77 on M and F, and west of HWY 77 T and Sat. Irrigation by hand-held hoses or drip irrigation systems are exempt. 2. Irrigation using hose-end sprinklers or automatic sprinkler systems for athletic fields is prohibited except during designated house between 8pm to 8am. 3. The watering of golf fairway areas is prohibited unless done with treated wastewater, reused water, or well water. 4. A water use surcharge of $10 shall be levied against all customers that use over 8,000 gallons per month.
Stage 4  Falcon and Amistad conservation level between 15% and 10% or flow capacity at 100% for 3 consecutive days. Cumulative reduction goal is 25%.

All elements of Stage 3 remain in effect except that: 1. irrigation utilizing hose-end sprinklers or automatic sprinkler systems for lawns, gardens, landscaped areas, trees, shrubs, and other plants is prohibited except during designated hours of 6am to 8am and 8pm to 11pm. Customers east of Hwy 77 on Wednesdays, and west of HWY 77 only on Saturdays. Irrigation by hand-held hoses or drip irrigation systems are exempt. 2. Washing of mobile vehicles not occurring on the premises of commercial carwashes and service stations, and not in the immediate interest of public health shall be prohibited except between the hours of 6am-8am and 8pm to 11pm and only on the owner’s premises. Customers East of HWY 77 are allowed to on Wednesdays, customers west of HWY 77 are allowed to on Saturdays. 3. Commercial car washes and service stations in the immediate interest of public health, safety and welfare shall be limited to five (5%) percent of their monthly average usage based on the last twelve billing periods for each of such customer. After such usage, the Mayor or his designee shall enforce this subsection by terminating water service. 4. Commercial nurseries, sod farmers, and similar establishments shall water only on designated days between 10pm and 5am and shall use only hand-held hoses, drip irrigation systems or hand-held buckets. 5. The filling, refilling or adding of water, except to maintain the structural integrity of a pool, to swimming and/or wading pools is prohibited. 6. The operation of any ornamental fountain with or without recirculating features is prohibited. 7. Irrigation for athletic fields is prohibited except between the hour of 8pm to 8am with same designated days as other customers. 8. A water surcharge of $15 shall be levied against all customers that use over 8,000 gallons per month.
### BASIS OF DROUGHT

#### TRIGGERS:

**Stage 1**
- In effect at all times

**Stage 2**
- Demand reaches or exceeds 85% of capacity for 3 consecutive days
- Amistad-Falcon reservoirs reach 40% capacity
- Including but not limited to: system outage, equipment failure, or supply contamination

**Stage 3**
- Demand reaches or exceeds 90% of capacity for 3 consecutive days
- Amistad-Falcon reservoirs reach 25% capacity
- Including but not limited to: system outage, equipment failure, or supply contamination

#### ACTIONS:

**Stage 1**
- Customers asked to voluntarily limit water use to an amount absolutely necessary for health, business, and irrigation.
- The means and/or schedule of the following is restricted: Irrigation, but drip method or hand-held buckets permitted at any time; washing motor vehicles, except commercial carwashes or service stations; washing or sprinkling foundations; adding water to swimming pools; operation of fountains or ponds, except with a recycling system; irrigation for golf courses, except those using wastewater effluent; hydrants restricted to fire fighting and necessary activities.

**Stage 2**
- All stage 2 restrictions except: further restrictions on means and schedule for irrigation, except by drip or hand-held buckets; watering of golf fairways is prohibited unless with wastewater effluent, reused water, or well water; customers to pay a water surcharge.

City of McAllen McAllen Public Utility, 5/29/2018

---

**Stage 5**
Falcon and Amistad conservation level at 10% or less or flow capacity at 100% for 3 consecutive days. Cumulative reduction goal is 35%.

All elements of Stage 4 shall remain in effect in Stage 5 except that: 1. No applications for new, additional, further expanded, or increased-in-size water service connections, meters, service lines, pipeline extensions, mains, or other water service facilities of any kind shall be allowed, approved or installed except as approved by the City Council. 2. All allocations of water use to non-essential Industrial and Commercial customers shall be reduced to amounts as established by the Mayor, his designee or the Water Advisory Council. 3. The maximum monthly water use allocation for residential customers may be established with revised rate schedules and penalties by the City Council upon recommendation by the Mayor, his designee or the Water Advisory Council. 4. Irrigation by hose-end sprinklers or automatic sprinkler systems is prohibited.

Irrigation by hand-held hoses or drip irrigation systems is allowed between 6am to 8am and 8pm to 11pm for customers east of HWY 77 on Wednesdays and customers west of HWY 77 on Saturdays.

The washing of mobile vehicles not occurring on the premises of commercial car washes and service stations and not in the immediate interest of the public health, safety, and welfare is prohibited.

6. Irrigation for athletic fields is prohibited.

6. A water use surcharge of $20 shall be levied against all customers that use over 8,000 gallons per month.
| Stage 4 | Valid triggers: 1. Demand reaches or exceeds 95% of capacity for 3 consecutive days. 2. Amistad-Falcon reservoirs reach 20% capacity. 3. Including but not limited to: system outage, equipment failure, or supply contamination. | All stage 2 and 3 restrictions except: further restrictions on means and schedule for irrigation; washing of motor vehicles not occurring on commercial carwashes and not in the immediate interest of public health and safety is prohibited; carwashes in the interest of public health and safety limited to 50% of monthly average; commercial nurseries, sod farmers, etc. limited to means and schedule restrictions; adding water to pools, except to maintain structural integrity, is prohibited; operation of fountains prohibited; customers to pay a water surcharge. |
| Stage 5 | Valid triggers: 1. Demand reaches or exceeds 100% of capacity. 2. Amistad-Falcon reservoirs reach 15% capacity. 3. Including but not limited to: system outage, equipment failure, or supply contamination. | All stage 2, 3, and 4 restrictions except: no applications for new, additional, or expanded water connections, lines, etc. are allowed except as approved by PUB; water allocations to non-essential customers reduced as established by the PUB; max monthly water allocation for residential customers established with revised rate schedules and penalties by the PUB; irrigation permitted only by handheld hoses, handheld faucet filled buckets; drip irrigation on set schedule; customers to pay a water surcharge. |

**Military Highway Water Supply Corporation 5/5/2014**

**Basis of Drought:** Seasonal, water demands, low rainfall, system failure or water line breaks

**Triggers:**

**Stage 1**
Automatically initiated annually from May 1 through October 31 of each year.

**Stage 2**
a) Consumption of 80% of daily max supply for 3 consecutive days.
b) Supply is reduced to only 20% greater than the average consumption for the previous month.
c) Extended period (at least 8 weeks) of low rainfall and daily use is 20% above the use for the same period during the previous year.

**Stage 3**
a) Consumption of 90% of supply for 3 consecutive days.
b) Water level in any water storage tanks cannot be replenished for 3 consecutive days.

**Actions:**

**Military Highway WSC** will reduce or discontinue flushing of water mains and activate use of alternative supply source(s). Customers are asked to voluntarily limit irrigation of landscaped areas to certain days and times. All operations of Military Highway WSC shall voluntarily adhere to Stage 2 water restrictions. Customers are asked to voluntarily practice water conservation and to minimize or discontinue water use for non-essential purposes.

**Military Highway WSC** will discontinue flushing of water mains and irrigation of landscaped areas. The means and/or schedule for the following is restricted: irrigation of landscaped areas; washing of motor vehicles, boats, cars, etc.; use of water to fill swimming pool; irrigation of golf courses; operation of fountains or ponds except when necessary to support aquatic life; use of water for hydrants limited to fire fighting or activities to maintain public health, safety and welfare, and construction with special permit; and restaurants are prohibited from serving water except when requested. The following are non-essential and prohibited: wash down sidewalks, driveways, parking lots; use of water to wash down buildings or structures; use of water for dust control; flushing gutters; and failure to repair a controllable leak(s).

**Military Highway WSC** will discontinue flushing of water mains and irrigation of landscaped areas. All requirements for Stage 2 restrictions remain in effect except: the means and schedule for irrigation of landscaped areas is further restricted, watering of golf courses is prohibited, and the use of water for construction purposes from fire hydrants under special permit is to be discontinued.
| Stage 4 | a) Failure of major system component or an event which reduces the minimum residual pressure in the system below 20 psi for 24 hours or longer.  
b) Consumption of 95% or more of max supply for 3 consecutive days.  
c) Consumption of 100% of max supply at water storage levels in system drop during one 24-hour period.  
d) Natural or man-made contamination of water supply source(s)  
e) Declaration of a state of disaster due to drought conditions in a county or counties served by the Corporation.  
f) Reduction of wholesale water supply due to drought conditions.  
g) Other unforeseen events which could cause imminent health or safety risks to public.  

Military Highway WSC will discontinue flushing of water mains and irrigation of landscaped areas. All requirements for Stage 2 and 3 remain in effect except: the means and schedule for irrigation of landscaped areas is further restricted; use of water to wash motor vehicles, boats, airplanes, etc. is prohibited and schedules for commercial car washes are restricted; adding water to swimming pools is prohibited; operation of fountains or ponds is prohibited except where necessary to support aquatic life; and no applications for new, additional, or expanded water service connections, meters, mains, etc. of any kind shall be allowed or approved.

| Stage 5 | a) Major water line breaks, or pump or system failures occur, which case unprecedented loss of capability to provide water service.  
b) Natural or man-made contamination of the water supply source(s).  

Military Highway WSC will use an alternative supply source(s). All requirements of State 2, 3, and 4 restrictions remain in effect except: irrigation of landscaped areas is prohibited, of water to wash any motor vehicle, boat, plane, etc. is prohibited.  
In the event water shortage conditions threaten public health, safety, and welfare, the GM is authorized to ration water according to a set water allocation plan.

### Actions:

**Stage 1**
- All customers are asked to check their plumbing fixtures and facilities to ensure that they are working properly and no water is being wasted.
- Industrial, wholesale, and certain other customers are asked required to develop and submit a Water Rationing Plan within 60 days.

**Stage 2**
- All WSC owned facilities will be placed on mandatory conservation practices. All customers will be asked to comply with a voluntary watering schedule based on their location.

**Stage 3**
- The voluntary lawn watering provisions from Stage 2 will become mandatory. Allowing water to run off yards, plants, or vegetation into gutters or streets will be prohibited. Non commercial washing of vehicles must be done with a hand held hose or bucket between 6am and 9am or 7pm and 9pm. Commercial washing of any vehicle will only be allowed on commercial washing facilities. Industrial and wholesale customers are required to implement their Water Rationing Plans. The following are prohibited: exterior washing of structures; use of water to wash down sidewalks, driveways, or hard surfaces; continued use of defective plumbing; use of fire hydrants for purposes other than fire fighting; use of water for dust control.

**Stage 4**
- All nonessential water use not necessary to maintain public health, safety and welfare is prohibited. A pro rata curtailment of deliveries of wholesale water will occur. No application for new or expanded water connections, pipeline extensions, etc. will be allowed except as approved by the Review Committee. The maximum amount of water usage for customers and surcharges may be revised.

</table>
### Stage 2
NCRWP ground storage tank capacity falls to 25% capacity.

- a) Discuss water supply/demand conditions with customers and request they initiate measures to reduce water use
- b) Implement pro rata curtailment of water diversions and/or deliveries to add 50,000 gallons per day to storage tank

### Stage 3
NCRWP ground storage tank capacity fall to 10% capacity.

- a) Increase water blend ratios if possible, not exceeding 1000 ppm TDS
- b) Discuss water supply/demand conditions with customers and request they initiate measures to reduce water use and utilize alternative water supplies
- c) Implement pro rata curtailment of water diversions and/or deliveries to add 75,000 gallons per day to storage tank

### Stage 4
NCRWP has no production capacity.

- a) Notify customers of the need to switch to alternate water supplies
- b) If appropriate, notify member, county, and/or state emergency response officials
- c) Undertake necessary actions, including repairs and/or clean-up as needed.
- d) Prepare post-event assessment report on incident and critique of emergency response procedures

Olmito WSC, 3/7/2019
| Stage 5 | Major water line breaks or pump system failures occur, which cause unprecedented loss of capability to provide water service, or as determined by the following:  
  a) Olmito WSC Board of Directors  
  b) County Emergency Management Coordinator(s)  
  c) County Judge & Commissioners  
  d) Texas Commission on Environmental Quality | Irrigation of landscaped areas prohibited. All vehicle washing prohibited. |

| BASIS OF DROUGHT | Demand, treated water reservoir levels, raw water supplies, line break or system failure |
| BASES OF DROUGHT | ACTIONS: The public is asked to voluntarily follow certain schedules for landscape irrigation and vehicle washing and to stop using ornamental water features. The following is prohibited: use of ornamental water features without recirculation, washing down paved areas, failure to repair a leak in a timely manner. |
| Stage 1 | Total daily water demand equals or exceeds 15.0 MGD for 5 consecutive days | The public is asked to voluntarily follow certain schedules for landscape irrigation and vehicle washing and to stop using ornamental water features. |
| Stage 2 | Total daily water demand equals or exceeds 18.0 MGD for 3 consecutive days | The public is required to follow a certain schedule for landscape irrigation and vehicle washing. The following is prohibited: use of ornamental water features without recirculation, washing down paved areas, failure to repair a leak in a timely manner. |
| Stage 3 | Treated water reservoir levels do not refill above 75% overnight | The requirements for stage 2 are still in effect, except that the schedule to irrigate landscape and wash vehicles is stricter. |
| Stage 4 | a) Water supply available from Hidalgo Irrigation District No. 2 is equal to or less than 5,000 acre-feet  
  b) Notification is received from Hidalgo Irrigation District No. 2 pursuant to requirements in water purchase contract with district requesting initiation of Stage 4 Drought Contingency Plan | Further restrictions on irrigation scheduling; irrigation on golf courses more strictly regulated. Vehicle washing limited to certain times and only at commercial locations; filling of pools or other water bodies prohibited. |
| Stage 5 | a) Major water line breaks or pump or system failures occur, causing unprecedented loss of capability to provide water service  
  b) Natural of man-made contamination of water supply source(s) | Irrigation of landscaped areas prohibited. All vehicle washing prohibited. |

| BASIS OF DROUGHT | City of Pharr, 4/22/2019 |
| CITY OF PHARR, 4/22/2019 | ACTIONS: |
| TRIGGERS: | |
Stage 1
1. Water demand reaches 90% of firm production capacity; or
2. A disruption due to equipment or distribution system failure that would limit the capacity of the water system below 85% of capacity during high demand periods.

Goal: Achieve a voluntary 35% reduction in daily water use per capita. Voluntary water use restrictions include: a) Water customers are requested to voluntarily limit the irrigation of landscaped areas to Sundays and Thursdays for customers with a street address ending in an even number (0, 2, 4, 6 or 8), and Saturdays and Wednesdays for water customers with a street address ending in an odd number (1, 3, 5, 7 or 9), and to irrigate landscapes only between the hours of midnight and 10:00 a.m. and 8:00 pm to midnight on designated watering days. (b) All operations of the City shall adhere to water use restrictions prescribed for Stage 2 of the Plan. (c) Water customers are requested to practice water conservation and to minimize or discontinue water use for non-essential purposes.

Stage 2
1. Water demand reaches 95% of firm production capacity; or
2. A disruption due to equipment or distribution system failure that would limit the capacity of the water system below 75% of capacity during high demand periods.

Goal: achieve 40% reduction in daily water use per capita. Restrictions include: (a) Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Sundays and Thursdays for customers with a street address ending in an even number, and Saturdays and Wednesdays for water customers with a street address ending in an odd number, and irrigation of landscaped areas is further limited to the hours of 12:00 midnight until 10:00 a.m. and between 8:00 p.m. and 12:00 midnight on designated watering days. However, irrigation of landscaped areas is permitted at anytime if it is by means of a hand-held hose, a faucet filled bucket or watering can of five (5) gallons or less, or drip irrigation system. (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight. Such washing, when allowed, shall be done with a hand-held bucket or a hand-held hose equipped with a positive shutoff nozzle for quick rises. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public are contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables. (c) Use of water to fill, refill, or add to any indoor or outdoor swimming pools, wading pools, or Jacuzzi-type pools is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight.
**Stage 3**

1. Water demand reaches 100% of firm production capacity; or
2. A disruption due to equipment or distribution system failure that would limit the capacity of the water system below 70% of capacity during high demand periods.

**Goal:** achieve 50% reduction in daily water use per capita. Restrictions include all requirements from Stage 2 except:

- (a) Irrigation of landscaped areas shall be limited to designate watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, drip irrigation, or permanently installed automatic sprinkler system only. The use of hose-end sprinklers is prohibited at all times.
- (b) The watering of golf course tees is prohibited unless the golf course utilizes a water source other than that provided by the City.
- (c) The use of water for construction purposes from designated fire hydrants under special permit is to be discontinued.

**Stage 4**

In the event of an extended period of the severe condition or any natural catastrophic situations that interrupt or have the potential to interrupt the City's potable water supply, the City is authorized to take all reasonable measures as deemed necessary to provide for the public's safety.

**Goal:** achieve a 60% reduction in daily water use per capita. Restrictions include all requirements of Stage 2 and 3 except:

- (a) Irrigation of landscaped areas shall be limited to designated watering days between the hours of 6:00 a.m. and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, or drip irrigation only. The use of hose-end sprinklers or permanently installed automatic sprinkler systems are prohibited at all times.
- (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle not occurring on the premises of a commercial car wash and commercial service stations and not in the immediate interest of public health, safety, and welfare is prohibited. Further, such vehicle washing at commercial car washes and commercial service stations shall occur only between the hours of 6:00 a.m. and 10:00 a.m. and between 6:00 p.m. and 10 p.m.
- (c) The filling, refilling, or adding of water to swimming pools, wading pools, and Jacuzzi-type pools is prohibited.
- (d) Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.
- (e) No application for new, additional, expanded, or increased-in-size water service connections, meters, service lines, pipeline extensions, mains, or water service facilities of any kind shall be approved, and time limits for approval of such applications are hereby suspended for such time as this drought response stage or a higher-numbered stage shall be in effect.
### Stage 5
Customers shall be required to comply with the requirements and restrictions for Stage 5 of this Plan when Board President, or his/her designee, determines that a water supply emergency exists based on: 1. Major water line breaks, or pump or system failures occur, which cause unprecedented loss of capability to provide water service; or, 2. Natural or man-made contamination of the water supply source(s).

Goal: achieve a 60% reduction in daily use per capita. Restrictions include all requirements from Stages 2, 3, and 4 except: (a) Irrigation of landscaped areas is absolutely prohibited. (b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is absolutely prohibited.

</table>

City of San Benito, 8/1/2014
Stage 2
Falcon and Amistad US storage level is 25% of capacity, or upon request from Cameron County Irrigation District #2 as applied to customers within the city with lawn watering contracts. Or the City Manager may implement Stage 2 at his discretion if the water treatment plant reaches 95% of capacity.

City Manager notifies, by public announcement and publication, customers of the water system of mandatory conservation and limitation of use. All municipal operations are placed on mandatory conservation. Lawn watering is not allowed between 10:00 am and 6:00 pm. Grass, trees, shrubbery, annual, biennial or perennial vines, gardens, and other similar vegetation may be watered with a hand-held hose equipped with a positive shut-off nozzle or a hand-held bucket or water can no larger than 5 gallons in capacity. Drip irrigation and sprinkler systems are allowed. Car, trailer, and boat washing are limited to 5-gallon buckets or hand-held hose between 6:00 pm and 9:00 pm. Wasting of water as a result of defective plumbing is prohibited. Hydrants may only be used for fire-fighting. Ornamental fountains or artificial waterfalls where water is not reused or recirculated are prohibited. Washing sidewalks, driveways, parking lots, tennis courts, and buildings is prohibited. Water may only be used for dust control for health hazards. Swimming pools and jacuzzis are not permitted to use water except where required to maintain structural integrity. The city may not use water to place new agricultural land into service. Rate surcharges are put into place.

Stage 3
Falcon and Amistad US storage level is 10% of capacity, or upon request from Cameron County Irrigation District #2 as applied to customers within the city with lawn watering contracts. Or the City Manager may implement Stage 2 at his discretion if the water treatment plant reaches 95% of capacity.

All requirements of stage 2 remain in effect, plus water allowed to run off of yards, plants or vegetation into gutters is prohibited. Rates are increased for high-volume users.

Stage 4
Falcon and Amistad US storage level is 15% of capacity, or upon request from Cameron County Irrigation District #2 as applied to customers within the city with lawn watering contracts. Or the City Manager may implement Stage 2 at his discretion if the water treatment plant reaches 95% of capacity.

All nonessential water use not necessary to maintain public health, safety and welfare is prohibited. Plant watering, car washing, and fountains as described above are prohibited. No new or expanded water service connections, services or facilities may be approved. Residential use may be capped and surcharges associated by the City Commission. The City Manager may take any other actions necessary.

BASIS OF DROUGHT

TRIGGERS:
Stage 1
Always in effect between April 1st and September 30th of every year.

Stage 2
Implemented when: 1. drought conditions are officially declared for the County, 2. water levels in Falcon Reservoir drop below 80% of conservation levels, 3. daily water consumption exceeds 90% of daily supply capacity for ten consecutive days.

Stage 3
Implemented when: 1. extreme drought conditions are officially declared for the County, 2. water levels in Falcon Reservoir drop below 70% of conservation levels, 3. raw water supply drop to 10% below projected needs, 4. daily water consumption exceeds 100% of daily supply capacity for ten consecutive days.

ACTIONS:
Customers are asked to voluntarily limit water use by the following measures:
1. only irrigate between 6pm and 10am,
2. irrigate on certain days, based on address,
3. prevent significant run off from lawn irrigation,
4. wash vehicles only on same days as lawn watering,
5. minimize use of potable water for washing sidewalks, drives, and dust control.

Customers will be required to implement the following measures:
1. only irrigate between 6pm and 10am,
2. irrigate on certain days, based on address,
3. prevent significant run off from lawn irrigation,
4. wash vehicles only on same days as lawn watering,
5. do not use of potable water for washing sidewalks, drives, and dust control.

Customers will be required to implement the following measures:
1. irrigation of landscaped areas only allowed on certain days based on location and between 8pm and 10am, except for irrigation with a hand-held hose, bucket, or drip system,
2. vehicle washing not at a commercial facility is only allowed on watering days between 8pm and 10am and with a bucket or hand-held hose with shut off nozzle,
3. filling pools is only allowed on water days between 8pm and 10am,
4. operation of ornamental fountains is prohibited unless they are required to support aquatic life or are equipped with recirculation system,
5. use of water from hydrants or flush valves are only permitted to maintain public health, safety, or welfare,
6. water golf course and parks is only allowed on water days between 8pm and 10am and with a hand-held hose,
7. the following are prohibited: wash down of sidewalks, walkways, driveways, etc.; wash down of building and structures; use of water for dust control; flushing gutters or permitting water to accumulate in gutters or streets; failure to repair a controllable leak within a reasonable amount of time; any waste of water.

Falcon reservoir level and/or demand
| Stage 4 | Implemented when: 1. emergency drought conditions are officially declared for the County, 2. water levels in Falcon Reservoir drop below 60% of conservation levels, 3. raw water supply drop to 30% below projected needs, 4. daily water consumption exceeds 105% of daily supply capacity for ten consecutive days | Customers will be required to implement the following measures: 1. irrigation of lawns and landscaped areas is prohibited, 2. vehicle washing is only permitted at a commercial facility, 3. filling pools is prohibited, 4. operation of ornamental fountains is prohibited unless required to sustain aquatic life or if it is equipped with a recirculation system, 5. use of water from hydrants or flush valves is only permitted to maintain public health, safety, and welfare, 6. use of water to irrigate golf course and parks is prohibited, 6. the following are prohibited: wash down of sidewalks, walkways, driveways, etc.; wash down of building and structures; use of water for dust control; flushing gutters or permitting water to accumulate in gutters or streets; failure to repair a controllable leak within a reasonable amount of time; any waste of water. |

| BASIS OF DROUGHT | Storage in Amistad-Falcon Reservoir system, water use compared with system capacity, irrigation allocations, treatment or delivery failures |

| Stage 1 | TRIGGERS: 1) When the level of United States water stored in Rio-Grande River Basin Reservoirs reaches 60 % of capacity, or Valley MUD #2 allocation of irrigation water has reached 5400 acre-ft. 2) When equipment failure or treatment problems causes the capacity of Valley MUD #2’s treatment and pumping facilities to fall to within 90% of the daily consumption of potable water. | ACTIONS: 1) Water customers are requested to voluntarily limit the irrigation of landscaped areas to no more than 3 days a week. Do not water between the hours of 10:00 a.m. and 7:00 p.m. 2) Water customers are requested to practice water conservation and to minimize or discontinue water use for non-essential purposes. |

Valley MUD No. 2, 6/18/2013
Stage 2

1) When the level of United States water stored in Rio-Grande River Basin Reservoirs reaches 50% of capacity, or Valley MUD #2 allocation of water has reached 3350 acre-ft.

2) When equipment failure or treatment problems causes the capacity of Valley MUD #2’s treatment and pumping facilities to fall to within 70% of the daily consumption of potable water.

1) Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Sundays and Thursdays for customers with a street address ending in an even number, and Saturdays and Wednesdays for water customers with a street address ending in an odd number. Irrigation of landscaped areas is further restricted and prohibited between the hours of 10:00 a.m. and 7:00 p.m. on designated watering days. However, irrigation of landscaped areas is permitted at any time if it is by means of a hand-held hose, a faucet filled bucket or watering can of five (5) gallons or less, or drip irrigation system.

2) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days. Such washing shall be done with a bucket and a hand-held hose equipped with a positive shutoff nozzle for quick rinses. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public are contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables.

3) Operation of any ponds or ornamental fountain for aesthetic or scenic purposes is prohibited.

4) Use of water from hydrants shall be limited to firefighting, related activities, or other activities necessary to maintain public health, safety, and welfare. Use of water from designated fire hydrants for construction purposes may be allowed under special permit from the Valley MUD #2.

5) Irrigation of golf course greens, tees, and fairways is permitted between the hours 7:00 p.m. and 10:00 a.m.
Stage 3

1) When the level of United States water stored in Rio-Grande River Basin Reservoirs reaches 30%, or Valley MUD #2 allocation of water has reached 1900 acre-ft.

2) When equipment failure or treatment problems causes the capacity of Valley MUD #2’s treatment and pumping facilities to fall to within 50% of the daily consumption of potable water.

1) Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Thursdays for customers with a street address ending in an even number, and Wednesdays for water customers with a street address ending in an odd number. Irrigation of landscaped areas is further restricted and prohibited between the hours of 10:00 a.m. and 7:00 p.m. on designated watering days. Irrigation of landscaped areas is permitted at any time if it is by means of a hand-held hose, a faucet filled bucket or watering can of five (5) gallons or less, or drip irrigation system.

2) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days. Such washing shall be done with a bucket and a hand-held hose equipped with a positive shutoff nozzle for quick rinses. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public are contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables.

3) Operation of any ponds or ornamental fountain for aesthetic or scenic purposes is prohibited. Fountains that are equipped with a recirculation system are not exempt at this stage.

4) Use of water from hydrants shall be limited to firefighting, related activities, or other activities necessary to maintain public health, safety, and welfare. The use of water for construction purposes from designated fire hydrants under special permit is to be discontinued.

5) Irrigation of golf course greens, tees, is permitted between the hours 7:00 p.m. and 10:00 a.m.
Stage 4
1) when the level of United States water stored in Rio-Grande River Basin Reservoirs reaches 20%, or Valley MUD #2 allocation of water has reached 800 acre-ft. 2) When equipment failure or treatment problems causes the capacity of Valley MUD #2’s treatment and pumping facilities to fall to within 25% of the daily consumption of potable water. 3) When water levels in the Rio Grande are low enough to restrict pumping.

1) All irrigation of landscapes is prohibited except for minimal hand watering of drought stressed trees and shrubs. 2) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited. Washing may be exempted from these regulations if the health, safety, and welfare of the public are contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables. 3) Operation of any ponds or ornamental fountains for aesthetic or scenic purposes is prohibited. Fountains that are equipped with a recirculation system are not exempt at this stage. 4) Use of water from hydrants shall be limited to firefighting, related activities, or other activities necessary to maintain public health, safety, and welfare. The use of water for construction purposes from designated fire hydrants under special permit is to be discontinued. 5) Hand watering of golf course greens and tees is permitted between the hours 7:00 p.m. and 10:00 a.m. Treated effluent must be used for this hand watering. The watering of golf course fairways is prohibited. 6) The following uses of water are defined as non-essential and are prohibited: a) Wash down of any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas; b) use of water to wash down buildings or structures for purposes other than immediate fire protection; c) use of water for dust control; d) flushing gutters or permitting water to run or accumulate in any gutter or street; and e) failure to repair a controllable leak(s) within 3 working days after having been given notice directing the repair of such leak(s).

Drought Contingency Plan for a Water Supply Corporation .................................................. 25
DROUGHT CONTINGENCY PLAN FOR AN IRRIGATION DISTRICT

Texas Commission on Environmental Quality

Instructions: The following form is a model of a drought contingency plan for an irrigation district. Not all items may apply to your district’s situation. This form is supplied for your convenience, but you are not required to use this form to submit your plan to the TCEQ. Submit completed plans to: Water Supply Division MC 160, TCEQ, P.O. Box 13087, Austin TX 78711-3087.

(Irrigation District)

(Address, City, Zip Code)

(Date)

SECTION I: DECLARATION OF POLICY, PURPOSE, AND INTENT
The Board of Directors of the _________________ (name of irrigation district) deems it to be in the interest of the District to adopt Rules and Regulations governing the equitable and efficient allocation of limited water supplies during times of shortage. These Rules and Regulations constitute the District’s drought contingency plan required under Section 11.1272, Texas Water Code, Vernon’s Texas Codes Annotated, and associated administrative rules of the Texas Commission on Environmental Quality (Title 30, Texas Administrative Code, Chapter 288).

SECTION II: USER INVOLVEMENT
Opportunity for users of water from the _________________ (name of irrigation district) was provided by means of ________________ (describe methods used to inform water users about the preparation of the plan and opportunities for input; for example, scheduling and providing notice of a public meeting to accept user input on the plan).

SECTION III: USER EDUCATION
The ________________ (name of irrigation district) will periodically provide water users with information about the Plan, including information about the conditions under which water allocation is to be initiated or terminated and the district’s policies and procedures for water allocation. This information will be provided by means of ________________ (e.g. describe methods to be used to provide water users with information about the Plan; for example, by providing copies of the Plan and by posting water allocation rules and regulations on the district’s public bulletin board).
SECTION IV: AUTHORIZATION
The _______________ (e.g., general manager) is hereby authorized and directed to implement the applicable provision of the Plan upon determination by the Board that such implementation is necessary to ensure the equitable and efficient allocation of limited water supplies during times of shortage.

SECTION V: APPLICATION
The provisions of the Plan shall apply to all persons utilizing water provided by the _______________ (name of irrigation district). The term “person” as used in the Plan includes individuals, corporations, partnerships, associations, and all other legal entities.

SECTION VI: INITIATION OF WATER ALLOCATION
The __________ (designated official) shall monitor water supply conditions on a __________ (e.g. weekly, monthly) basis and shall make recommendations to the Board regarding irrigation of water allocation. Upon approval of the Board, water allocation will become effective when ________________ (describe the criteria and the basis for the criteria):

Below are examples of the types of triggering criteria that might be used; singly or in combination, in an irrigation district’s drought contingency plan:

- Example 1: Combined storage in the _________________ Amistad-Falcon reservoir system is equal to or less than _____________ (acre-feet and/or percentage of storage capacity).
- Example 2: The storage balance in the district’s irrigation water rights account reaches ______ acre-feet.
- Example 3: The storage balance in the district’s irrigation water rights account reaches an amount equivalent to ______ (number) irrigations for each flat rate acre in which all flat rate assessments are paid and current.
- Example 4: The ____________ Rio Grande Watermaster notifies the district that water deliveries will be limited to ___________ acre-feet per year (i.e. a level below that required for unrestricted irrigation).

SECTION VII: TERMINATION OF WATER ALLOCATION
The district’s water allocation policies will remain in effect until the conditions defined in Section IV of the Plan no longer exist and the Board deems that the need to allocate water no longer exists.

SECTION VIII:  NOTICE
Notice of the initiation of water allocation will be given by notice posted on the District’s public bulletin board and by mail to each _________ (e.g. landowner, holders of active irrigation accounts, etc.).
SECTION IX: WATER ALLOCATION

(a) In identifying specific, quantified targets for water allocation to be achieved during periods of water shortages and drought, each irrigation user shall be allocated _____ irrigations or ________ acre-feet of water each flat rate acre on which all taxes, fees, and charges have been paid. The water allotment in each irrigation account will be expressed in acre-feet of water.

Include explanation of water allocation procedure. For example, in the Lower Rio Grande Valley, an “irrigation” is typically considered to be equivalent to eight (8) inches of water per irrigation acre; consisting of six (6) inches of water per acre applied plus two (2) inches of water lost in transporting the water from the river to the land. Thus, three irrigations would be equal to 24 inches of water per acre or an allocation of 2.0 acre-feet of water measured at the diversion from the river.

(b) As additional water supplies become available to the District in an amount reasonably sufficient for allocation to the District’s irrigation users, the additional water made available to the District will be equally distributed, on a pro rata basis, to those irrigation users having ________________.

   ● Example 1: An account balance of less than _____ irrigations for each flat rate acre (i.e. ____ acre-feet).
   ● Example 2: An account balance of less than ____ acre-feet of water for each flat rate acre.
   ● Example 3: An account balance of less than ____ acre-feet of water.

(c) The amount of water charged against a user’s water allocation will be ____ (e.g. eight inches) per irrigation, or one allocation unit, unless water deliveries to the land are metered. Metered water deliveries will be charges based on actual measured use. In order to maintain parity in charging use against a water allocation between non-metered and metered deliveries, a loss factor of ____ percent of the water delivered in a metered situation will be added to the measured use and will be charged against the user’s water allocation. Any metered use, with the loss factor applied, that is less than eight (8) inches per acre shall be credited back to the allocation unit and will be available to the user. It shall be a violation of the Rules and Regulations for a water user to use water in excess of the amount of water contained in the users irrigation account.

(d) Acreage in an irrigation account that has not been irrigated for any reason within the last two (2) consecutive years will be considered inactive and will not be allocated water. Any landowner whose land has not been irrigated within the last two (2) consecutive years, may, upon application to the District expressing intent to irrigate the land, receive future allocations. However, irrigation water allocated shall be applied only upon the acreage to which it was allocated and such water allotment cannot be transferred until there have been two consecutive years of use.

SECTION X: TRANSFERS OF ALLOTMENTS

(a) A water allocation in an active irrigation account may be transferred within the boundaries of the District from one irrigation account to another. The transfer of water can only be made by the
landowner’s agent who is authorized in writing to act on behalf of the landowner in the transfer of all or part of the water allocation from the described land of the landowner covered by the irrigation account.

(b) A water allocation may not be transferred to land owned by a landowner outside the District boundaries.

A water allocation may be transferred to land outside the District’s boundaries by paying the current water charge as if the water was actually delivered by the District to the land covered by an irrigation account. The amount of water allowed to be transferred shall be stated in terms of acre-feet and deducted from the landowner’s current allocation balance in the irrigation account. Transfers of water outside the District shall not affect the allocation of water under Section VII of these Rules and Regulations.

(c) Water from outside the District may not be transferred by a landowner for use within the District.

Water from outside the District may be transferred by a landowner for use within the District. The District will divert and deliver the water on the same basis as District water is delivered, except that a ___ percent conveyance loss will be charged against the amount of water transferred for use in the District as the water is delivered.

SECTION XI: PENALTIES

Any person who willfully opens, closes, changes or interferes with any headgate or uses water in violation of these Rules and Regulations, shall be considered in violation of Section 11.0083, Texas Water Code, Vernon’s Texas Codes Annotated, which provides for punishment by fine of not less than $10.00 nor more than $200.00 or by confinement in the county jail for not more than thirty (30) days, or both, for each violation, and these penalties provided by the laws of the State and may be enforced by complaints filed in the appropriate court jurisdiction in ______ County, all in accordance with Section 11.083; and in addition, the District may pursue a civil remedy in the way of damages and/or injunction against the violation of any of the foregoing Rules and Regulations.

SECTION XII: SEVERABILITY

It is hereby declared to be the intention of the Board of Directors of the _____________ (name of irrigation district) that the sections, paragraphs, sentences, clauses, and phrases of this Plan shall be declared unconstitutional by the valid judgment or decree of any court of competent jurisdiction, such unconstitutionality shall not affect any of the remaining phrases, clauses, sentences, paragraphs, and sections of this Plan, since the same would not have been enacted by the Board without the incorporation into this Plan of any such unconstitutional phrase, clause, sentence, paragraph, or section.
SECTION XIII: AUTHORITY
The foregoing rules and regulations are adopted pursuant to and in accordance with Sections 11.039, 11.083, 11.127; Section 49.004; and Section 58.127-130 of the Texas Water Code, Vernon’s Texas Codes Annotated.

SECTION XIV: EFFECTIVE DATE OF PLAN
The effective date of this Rule shall be five (5) days following the date of Publication hereof and ignorance of the Rules and Regulations is not a defense for a prosecution for enforcement of the violation of the Rules and Regulations.
DROUGHT CONTINGENCY PLAN FOR A RETAIL PUBLIC WATER SUPPLIER

Texas Commission on Environmental Quality

Instructions: The following form is a model of a drought contingency plan for a retail public water supplier. Not all items may apply to your system’s situation. This form is supplied for your convenience, but you are not required to use this form to submit your plan to the TCEQ. Submit completed plans to: Water Supply Division MC 160, TCEQ, P.O. Box 13087, Austin TX 78711-3087.

(Address, City, Zip Code)

________________________________________________
(CCN#)

________________________________________________
(PWS #s)

________________________________________________
(Date)

SECTION I: DECLARATION OF POLICY, PURPOSE, AND INTENT

In order to conserve the available water supply and protect the integrity of water supply facilities, with particular regard for domestic water use, sanitation, and fire protection, and to protect and preserve public health, welfare, and safety and minimize the adverse impacts of water supply shortage or other water supply emergency conditions, the ________________ (name of your water supplier) hereby adopts the following regulations and restrictions on the delivery and consumption of water through an ordinance/or resolution (see Appendix C for an example).

Water uses regulated or prohibited under this Drought Contingency Plan (the Plan) are considered to be non-essential and continuation of such uses during times of water shortage or other emergency water
supply condition are deemed to constitute a waste of water which subjects the offender(s) to penalties as defined in Section XI of this Plan.

SECTION II: PUBLIC INVOLVEMENT
Opportunity for the public to provide input into the preparation of the Plan was provided by the _______________ (name of your water supplier) by means of _______________ (describe methods used to inform the public about the preparation of the plan and provide opportunities for input; for example, scheduling and providing public notice of a public meeting to accept input on the Plan).

SECTION III: PUBLIC EDUCATION
The _______________ (name of your water supplier) will periodically provide the public with information about the Plan, including information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage. This information will be provided by means of _______________ (describe methods to be used to provide information to the public about the Plan; for example, public events, press releases or utility bill inserts).

SECTION IV: COORDINATION WITH REGIONAL WATER PLANNING GROUPS
The service area of the _______________ (name of your water supplier) is located within the _______________ (name of regional water planning area or areas) and _______________ (name of your water supplier) has provided a copy of this Plan to the _______________ (name of your regional water planning group or groups).

SECTION V: AUTHORIZATION
The _______________ (designated official; for example, the mayor, city manager, utility director, general manager, etc.), or his/her designee is hereby authorized and directed to implement the applicable provisions of this Plan upon determination that such implementation is necessary to protect public health, safety, and welfare. The _______________, (designated official) or his/her designee shall have the authority to initiate or terminate drought or other water supply emergency response measures as described in this Plan.

SECTION VI: APPLICATION
The provisions of this Plan shall apply to all persons, customers, and property utilizing water provided by the _______________ (name of your water supplier). The terms person and customer as used in the Plan include individuals, corporations, partnerships, associations, and all other legal entities.

SECTION VII: DEFINITIONS
For the purposes of this Plan, the following definitions shall apply:

Aesthetic water use: water use for ornamental or decorative purposes such as fountains, reflecting pools, and water gardens.
Commercial and institutional water use: water use which is integral to the operations of commercial and non-profit establishments and governmental entities such as retail establishments, hotels and motels, restaurants, and office buildings.

Conservation: those practices, techniques, and technologies that reduce the consumption of water, reduce the loss or waste of water, improve the efficiency in the use of water or increase the recycling and reuse of water so that a supply is conserved and made available for future or alternative uses.

Customer: any person, company, or organization using water supplied by _____________ (name of your water supplier).

Domestic water use: water use for personal needs or for household or sanitary purposes such as drinking, bathing, heating, cooking, sanitation, or for cleaning a residence, business, industry, or institution.

Even number address: street addresses, box numbers, or rural postal route numbers ending in 0, 2, 4, 6, or 8 and locations without addresses.

Industrial water use: the use of water in processes designed to convert materials of lower value into forms having greater usability and value.

Landscape irrigation use: water used for the irrigation and maintenance of landscaped areas, whether publicly or privately owned, including residential and commercial lawns, gardens, golf courses, parks, and rights-of-way and medians.

Non-essential water use: water uses that are not essential nor required for the protection of public, health, safety, and welfare, including:

a. irrigation of landscape areas, including parks, athletic fields, and golf courses, except otherwise provided under this Plan;

b. use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle;

c. use of water to wash down any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas;

d. use of water to wash down buildings or structures for purposes other than immediate fire protection;

e. flushing gutters or permitting water to run or accumulate in any gutter or street;

f. use of water to fill, refill, or add to any indoor or outdoor swimming pools or Jacuzzi-type pools;

g. use of water in a fountain or pond for aesthetic or scenic purposes except where necessary to support aquatic life;
h. failure to repair a controllable leak(s) within a reasonable period after having been given notice
directing the repair of such leak(s); and

i. use of water from hydrants for construction purposes or any other purposes other than
firefighting.

Odd numbered address: street addresses, box numbers, or rural postal route numbers ending in 1, 3, 5,
7, or 9.

**SECTION VIII: CRITERIA FOR INITIATION AND TERMINATION OF DROUGHT RESPONSE STAGES**

The ________________ (designated official) or his/her designee shall monitor water supply and/or
demand conditions on a __________ (example: daily, weekly, monthly) basis and shall determine when
conditions warrant initiation or termination of each stage of the Plan, that is, when the specified triggers
are reached.

The triggering criteria described below are based on ________________________________

______________________________________________________________________________

(provide a brief description of the rationale for the triggering criteria; for example, triggering criteria /
trigger levels based on a statistical analysis of the vulnerability of the water source under drought of
record conditions, or based on known system capacity limits).

**Stage 1 Triggers -- MILD Water Shortage Conditions**

Requirements for initiation

Customers shall be requested to voluntarily conserve water and adhere to the prescribed restrictions on
certain water uses, defined in Section VIIB Definitions, when

_________________________________________________________________________

(Describe triggering criteria / trigger levels; see examples below).

Following are examples of the types of triggering criteria that might be used in one or more successive
stages of a drought contingency plan. One or a combination of such criteria must be defined for each
drought response stage, but usually not all will apply. Select those appropriate to your system:

- Example 1: Annually, beginning on May 1 through September 30.
- Example 2: When the useable balance of water rights exceeds planned amount, based on time
  of year
- Example 3: When, pursuant to requirements specified in the _____________(name of your
  water supplier) wholesale water purchase contract with ____________ (name of your wholesale
  water supplier)
water supplier), notification is received requesting initiation of Stage 1 of the Drought Contingency Plan.

- Example 4: When the water supply available to the _______ (name of your water supplier) is equal to or less than _______ (acre-feet, percentage of storage, etc.).
- Example 5: When the static water level in the ____________ (name of your water supplier) well(s) is equal to or less than _____ feet above/below mean sea level.
- Example 6: When the specific capacity of the __________________ (name of your water supplier) well(s) is equal to or less than _____ percent of the well=s original specific capacity.
- Example 7: When total daily water demand equals or exceeds ______ million gallons for ___consecutive days of ____ million gallons on a single day (example: based on the safe operating capacity of water supply facilities).

The public water supplier may devise other triggering criteria which are tailored to its system.

Requirements for termination

Stage 1 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (e.g. 3) consecutive days.

**Stage 2 Triggers -- MODERATE Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses provided in Section IX of this Plan when ____________ (describe triggering criteria; see examples in Stage 1).

Requirements for termination

Stage 2 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (example: 3) consecutive days. Upon termination of Stage 2, Stage 1 becomes operative.

**Stage 3 Triggers B SEVERE Water Shortage Conditions**

Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses for Stage 3 of this Plan when ____________ (describe triggering criteria; see examples in Stage 1).

BLACK & VEATCH
Requirements for termination

Stage 3 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (example: 3) consecutive days. Upon termination of Stage 3, Stage 2 becomes operative.

Stage 4 Triggers -- CRITICAL Water Shortage Conditions
Requirements for initiation

Customers shall be required to comply with the requirements and restrictions on certain non-essential water uses for Stage 4 of this Plan when ____________ (describe triggering criteria; see examples in Stage 1).

Requirements for termination

Stage 4 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (example: 3) consecutive days. Upon termination of Stage 4, Stage 3 becomes operative.

Stage 5 Triggers -- EMERGENCY Water Shortage Conditions
Requirements for initiation

Customers shall be required to comply with the requirements and restrictions for Stage 5 of this Plan when ____________ (designated official), or his/her designee, determines that a water supply emergency exists based on:

1. Major water line breaks, or pump or system failures occur, which cause unprecedented loss of capability to provide water service; or

2. Natural or man-made contamination of the water supply source(s).

Requirements for termination

Stage 5 of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (example: 3) consecutive days.

Stage 6 Triggers -- WATER ALLOCATION
Requirements for initiation

Customers shall be required to comply with the water allocation plan prescribed in Section IX of this Plan and comply with the requirements and restrictions for Stage 5 of this Plan when ____________ (describe triggering criteria, see examples in Stage 1).
Requirements for termination - Water allocation may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of ___ (example: 3) consecutive days.

Note: The inclusion of WATER ALLOCATION as part of a drought contingency plan may not be required in all cases. For example, for a given water supplier, an analysis of water supply availability under drought of record conditions may indicate that there is essentially no risk of water supply shortage. Hence, a drought contingency plan for such a water supplier might only address facility capacity limitations and emergency conditions (example: supply source contamination and system capacity limitations).

**SECTION IX: DROUGHT RESPONSE STAGES**

The ______________ (designated official), or his/her designee, shall monitor water supply and/or demand conditions on a daily basis and, in accordance with the triggering criteria set forth in Section VIII of this Plan, shall determine that a mild, moderate, severe, critical, emergency or water shortage condition exists and shall implement the following notification procedures:

**Notification**

**Notification of the Public:**

The _________ (designated official) or his/ her designee shall notify the public by means of:

Examples:

- publication in a newspaper of general circulation,
- direct mail to each customer,
- public service announcements,
- signs posted in public places
- take-home fliers at schools.

**Additional Notification:**

The _________ (designated official) or his/ her designee shall notify directly, or cause to be notified directly, the following individuals and entities:

Examples:

- Mayor / Chairman and members of the City Council / Utility Board
- Fire Chief(s)
- City and/or County Emergency Management Coordinator(s)
Stage 1 Response -- MILD Water Shortage Conditions

Target: Achieve a voluntary ___ percent reduction in __________ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:

Describe additional measures, if any, to be implemented directly by (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, activation and use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

Voluntary Water Use Restrictions for Reducing Demand:

(a) Water customers are requested to voluntarily limit the irrigation of landscaped areas to Sundays and Thursdays for customers with a street address ending in an even number (0, 2, 4, 6 or 8), and Saturdays and Wednesdays for water customers with a street address ending in an odd number (1, 3, 5, 7 or 9), and to irrigate landscapes only between the hours of midnight and 10:00 a.m. and 8:00 p.m. to midnight on designated watering days.

(b) All operations of the _____________ (name of your water supplier) shall adhere to water use restrictions prescribed for Stage 2 of the Plan.

(c) Water customers are requested to practice water conservation and to minimize or discontinue water use for non-essential purposes.

Stage 2 Response -- MODERATE Water Shortage Conditions

Target: Achieve a ___ percent reduction in __________ (example: total water use, daily water demand, etc.).
Best Management Practices for Supply Management:

Describe additional measures, if any, to be implemented directly by ____________ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

Water Use Restrictions for Demand Reduction:

Under threat of penalty for violation, the following water use restrictions shall apply to all persons:

(a) Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Sundays and Thursdays for customers with a street address ending in an even number (0, 2, 4, 6 or 8), and Saturdays and Wednesdays for water customers with a street address ending in an odd number (1, 3, 5, 7 or 9), and irrigation of landscaped areas is further limited to the hours of 12:00 midnight until 10:00 a.m. and between 8:00 p.m. and 12:00 midnight on designated watering days. However, irrigation of landscaped areas is permitted at anytime if it is by means of a hand-held hose, a faucet filled bucket or watering can of five (5) gallons or less, or drip irrigation system.

(b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight. Such washing, when allowed, shall be done with a hand-held bucket or a hand-held hose equipped with a positive shutoff nozzle for quick rises. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public is contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables.

(c) Use of water to fill, refill, or add to any indoor or outdoor swimming pools, wading pools, or Jacuzzi-type pools is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight.

(d) Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.

(e) Use of water from hydrants shall be limited to fire fighting, related activities, or other activities necessary to maintain public health, safety, and welfare, except that use of water from designated fire hydrants for construction purposes may be allowed under special permit from the ________________ (name of your water supplier).

(f) Use of water for the irrigation of golf course greens, tees, and fairways is prohibited except on designated watering days between the hours 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight. However, if the golf course utilizes a water source other than that provided by the ________________ (name of your water supplier), the facility shall not be subject to these regulations.
(g) All restaurants are prohibited from serving water to patrons except upon request of the patron.

(h) The following uses of water are defined as non-essential and are prohibited:

1. wash down of any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas;

2. use of water to wash down buildings or structures for purposes other than immediate fire protection;

3. use of water for dust control;

4. flushing gutters or permitting water to run or accumulate in any gutter or street; and

5. failure to repair a controllable leak(s) within a reasonable period after having been given notice directing the repair of such leak(s).

Stage 3 Response -- SEVERE Water Shortage Conditions

Target: Achieve a ___ percent reduction in _________ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:

Describe additional measures, if any, to be implemented directly by ____________ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

Water Use Restrictions for Demand Reduction:

All requirements of Stage 2 shall remain in effect during Stage 3 except:

(a) Irrigation of landscaped areas shall be limited to designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, drip irrigation, or permanently installed automatic sprinkler system only. The use of hose-end sprinklers is prohibited at all times.

(b) The watering of golf course tees is prohibited unless the golf course utilizes a water source other than that provided by the ________________ (name of your water supplier).

(c) The use of water for construction purposes from designated fire hydrants under special permit is to be discontinued.
Stage 4 Response -- CRITICAL Water Shortage Conditions
Target: Achieve a ___ percent reduction in __________ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:

Describe additional measures, if any, to be implemented directly by ____________ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

Water Use Restrictions for Reducing Demand: All requirements of Stage 2 and 3 shall remain in effect during Stage 4 except:

(a) Irrigation of landscaped areas shall be limited to designated watering days between the hours of 6:00 a.m. and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight and shall be by means of hand-held hoses, hand-held buckets, or drip irrigation only. The use of hose-end sprinklers or permanently installed automatic sprinkler systems are prohibited at all times.

(b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle not occurring on the premises of a commercial car wash and commercial service stations and not in the immediate interest of public health, safety, and welfare is prohibited. Further, such vehicle washing at commercial car washes and commercial service stations shall occur only between the hours of 6:00 a.m. and 10:00 a.m. and between 6:00 p.m. and 10 p.m.

(c) The filling, refilling, or adding of water to swimming pools, wading pools, and Jacuzzi-type pools is prohibited.

(d) Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.

(e) No application for new, additional, expanded, or increased-in-size water service connections, meters, service lines, pipeline extensions, mains, or water service facilities of any kind shall be approved, and time limits for approval of such applications are hereby suspended for such time as this drought response stage or a higher-numbered stage shall be in effect.

Stage 5 Response -- EMERGENCY Water Shortage Conditions
Target: Achieve a ___ percent reduction in __________ (example: total water use, daily water demand, etc.).

Best Management Practices for Supply Management:
Describe additional measures, if any, to be implemented directly by ____________ (name of your water supplier) to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, reduced or discontinued irrigation of public landscaped areas; use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

Water Use Restrictions for Reducing Demand. All requirements of Stage 2, 3, and 4 shall remain in effect during Stage 5 except:

(a) Irrigation of landscaped areas is absolutely prohibited.

(b) Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is absolutely prohibited.

Stage 6 Response -- WATER ALLOCATION

In the event that water shortage conditions threaten public health, safety, and welfare, the ____________ (designated official) is hereby authorized to allocate water according to the following water allocation plan:

Single-Family Residential Customers

The allocation to residential water customers residing in a single-family dwelling shall be as follows:

<table>
<thead>
<tr>
<th>Persons per Household</th>
<th>Gallons per Month</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 or 2</td>
<td>6,000</td>
</tr>
<tr>
<td>3 or 4</td>
<td>7,000</td>
</tr>
<tr>
<td>5 or 6</td>
<td>8,000</td>
</tr>
<tr>
<td>7 or 8</td>
<td>9,000</td>
</tr>
<tr>
<td>9 or 10</td>
<td>10,000</td>
</tr>
<tr>
<td>11 or more</td>
<td>12,000</td>
</tr>
</tbody>
</table>

Household means the residential premises served by the customer’s meter. Persons per household include only those persons currently physically residing at the premises and expected to reside there for the entire billing period. It shall be assumed that a particular customer’s household is comprised of two (2) persons unless the customer notifies the ____________ (name of your water supplier) of a greater number of persons per household on a form prescribed by the ____________ designated official). The ____________ (designated official) shall give his/her best effort to see that such forms are mailed, otherwise provided, or made available to every residential customer. If, however, a customer does not receive such a form, it shall be the customer’s responsibility to go to the ____________ (name of your water supplier) offices to complete and sign the form claiming more than two (2) persons per household. New customers may claim more persons per household at the time of applying for water service on the form prescribed by the ____________ (designated official). When the number of persons per household increases so as to place the customer in a different allocation category, the customer
may notify the ____ (name of water supplier) on such form and the change will be implemented in
the next practicable billing period. If the number of persons in a household is reduced, the customer
shall notify the ____ (name of your water supplier) in writing within two (2) days. In prescribing the
method for claiming more than two (2) persons per household, the ____ (designated official) shall
adopt methods to insure the accuracy of the claim. Any person who knowingly, recklessly, or with
criminal negligence falsely reports the number of persons in a household or fails to timely notify the
____ (name of your water supplier) of a reduction in the number of person in a household
shall be fined not less than $____.

Residential water customers shall pay the following surcharges:

$____ for the first 1,000 gallons over allocation.
$____ for the second 1,000 gallons over allocation.
$____ for the third 1,000 gallons over allocation.
$____ for each additional 1,000 gallons over allocation.

Surcharges shall be cumulative.

Master-Metered Multi-Family Residential Customers

The allocation to a customer billed from a master meter which jointly measures water to multiple
permanent residential dwelling units (example: apartments, mobile homes) shall be allocated 6,000
gallons per month for each dwelling unit. It shall be assumed that such a customer’s meter serves two
dwelling units unless the customer notifies the ____ (name of your water supplier) of a greater
number on a form prescribed by the ____ (designated official). The ____ (designated official)
shall give his/her best effort to see that such forms are mailed, otherwise provided, or made
available to every such customer. If, however, a customer does not receive such a form, it shall be the
customer’s responsibility to go to the ____ (name of your water supplier) offices to complete
and sign the form claiming more than two (2) dwellings. A dwelling unit may be claimed under this
provision whether it is occupied or not. New customers may claim more dwelling units at the time of
applying for water service on the form prescribed by the ____ (designated official). If the number
of dwelling units served by a master meter is reduced, the customer shall notify the ____ (name of
your water supplier) in writing within two (2) days. In prescribing the method for claiming more than
two (2) dwelling units, the ____ (designated official) shall adopt methods to insure the accuracy of
the claim. Any person who knowingly, recklessly, or with criminal negligence falsely reports the number
of dwelling units served by a master meter or fails to timely notify the ____ (name of your
water supplier) of a reduction in the number of person in a household shall be fined not less than $____.
Customers billed from a master meter under this provision shall pay the following monthly
surcharges:

$____ for 1,000 gallons over allocation up through 1,000 gallons for
each dwelling unit.

$____, thereafter, for each additional 1,000 gallons over allocation
up through a second 1,000 gallons for each dwelling unit.

$____, thereafter, for each additional 1,000 gallons over allocation
up through a third 1,000 gallons for each dwelling unit.

$____, thereafter for each additional 1,000 gallons over allocation.

Surcharges shall be cumulative.

Commercial Customers

A monthly water allocation shall be established by the __________ (designated official), or his/her
designee, for each nonresidential commercial customer other than an industrial customer who uses
water for processing purposes. The non-residential customer’s allocation shall be approximately __ (e.g.
75%) percent of the customer’s usage for corresponding month’s billing period for the previous 12
months. If the customer’s billing history is shorter than 12 months, the monthly average for the period
for which there is a record shall be used for any monthly period for which no history exists. Provided,
however, a customer, __ percent of whose monthly usage is less than ____ gallons, shall be allocated
_____ gallons. The __________ (designated official) shall give his/her best effort to see that notice of each
non-residential customer’s allocation is mailed to such customer. If, however, a customer does not
receive such notice, it shall be the customer’s responsibility to contact the ____________ (name of your
water supplier) to determine the allocation. Upon request of the customer or at the initiative of the
___________ (designated official or
alternatively, a special water allocation review committee). Nonresidential commercial customers shall
pay the following surcharges:

Customers whose allocation is _____ gallons through ______ gallons per month:

$____ per thousand gallons for the first 1,000 gallons over allocation.

$____ per thousand gallons for the second 1,000 gallons over allocation.

$____ per thousand gallons for the third 1,000 gallons over allocation.

$____ per thousand gallons for each additional 1,000 gallons over allocation.
Customers whose allocation is ______ gallons per month or more:

___ times the block rate for each 1,000 gallons in excess of the allocation up through 5 percent above allocation.

___ times the block rate for each 1,000 gallons from 5 percent through 10 percent above allocation.

___ times the block rate for each 1,000 gallons from 10 percent through 15 percent above allocation.

___ times the block rate for each 1,000 gallons more than 15 percent above allocation.

The surcharges shall be cumulative. As used herein, block rate means the charge to the customer per 1,000 gallons at the regular water rate schedule at the level of the customer’s allocation.

Industrial Customers

A monthly water allocation shall be established by the ________ (designated official), or his/her designee, for each industrial customer, which uses water for processing purposes. The industrial customer’s allocation shall be approximately __ (example: 90%) percent of the customer’s water usage baseline. Ninety (90) days after the initial imposition of the allocation for industrial customers, the industrial customer’s allocation shall be further reduced to __ (example: 85%) percent of the customer’s water usage baseline. The industrial customer’s water use baseline will be computed on the average water use for the ______ month period ending prior to the date of implementation of Stage 2 of the Plan. If the industrial water customer’s billing history is shorter than ___ months, the monthly average for the period for which there is a record shall be used for any monthly period for which no billing history exists. The __________ (designated official) shall give his/her best effort to see that notice of each industrial customer’s allocation is mailed to such customer. If, however, a customer does not receive such notice, it shall be the customer’s responsibility to contact the ____________ (name of your water supplier) to determine the allocation, and the allocation shall be fully effective notwithstanding the lack of receipt of written notice. Upon request of the customer or at the initiative of the ___________ (designated official), the allocation may be reduced or increased, (1) if the designated period does not accurately reflect the customer’s normal water use because the customer had shut down a major processing unit for repair or overhaul during the period, (2) the customer has added or is in the process of adding significant additional processing capacity, (3) the customer has shut down or significantly reduced the production of a major processing unit, (4) the customer has previously implemented significant permanent water conservation measures such that the ability to further reduce water use is limited, (5) the customer agrees to transfer part of its allocation to another industrial customer, or (6) if other objective evidence demonstrates that the designated allocation is inaccurate under present conditions. A customer may appeal an allocation established hereunder to the ____________ (designated
official or alternatively, a special water allocation review committee). Industrial customers shall pay the following surcharges:

Customers whose allocation is _____ gallons through _______ gallons per month:

$____ per thousand gallons for the first 1,000 gallons over allocation.

$____ per thousand gallons for the second 1,000 gallons over allocation.

$____ per thousand gallons for the third 1,000 gallons over allocation.

$____ per thousand gallons for each additional 1,000 gallons over allocation.

Customers whose allocation is ______ gallons per month or more:

___ times the block rate for each 1,000 gallons in excess of the allocation up through 5 percent above allocation.

___ times the block rate for each 1,000 gallons from 5 percent through 10 percent above allocation.

___ times the block rate for each 1,000 gallons from 10 percent through 15 percent above allocation.

___ times the block rate for each 1,000 gallons more than 15 percent above allocation.

The surcharges shall be cumulative. As used herein, block rate means the charge to the customer per 1,000 gallons at the regular water rate schedule at the level of the customer’s allocation.

SECTION X: ENFORCEMENT

(a) No person shall knowingly or intentionally allow the use of water from the __________________ (name of your water supplier) for residential, commercial, industrial, agricultural, governmental, or any other purpose in a manner contrary to any provision of this Plan, or in an amount in excess of that permitted by the drought response stage in effect at the time pursuant to action taken by _____________(designated official), or his/her designee, in accordance with provisions of this Plan.

(b) Any person who violates this Plan is guilty of a misdemeanor and, upon conviction shall be punished by a fine of not less than ______ dollars ($__) and not more than ______ dollars ($__). Each day that one or more of the provisions in this Plan is violated shall constitute a separate offense. If a person is convicted of three or more distinct violations of this Plan, the _____________ (designated official) shall, upon due notice to the customer, be authorized to discontinue water service to the premises where such violations occur. Services discontinued under such circumstances shall be restored only upon payment of a re-connection charge, hereby established at $____, and any other costs incurred by the _________________ (name of your water supplier) in discontinuing service. In addition, suitable assurance must be given to the _________________ (designated official) that the same
action shall not be repeated while the Plan is in effect. Compliance with this plan may also be sought through injunctive relief in the district court.

(c) Any person, including a person classified as a water customer of the ______________ (name of your water supplier), in apparent control of the property where a violation occurs or originates shall be presumed to be the violator, and proof that the violation occurred on the person’s property shall constitute a rebuttable presumption that the person in apparent control of the property committed the violation, but any such person shall have the right to show that he/she did not commit the violation. Parents shall be presumed to be responsible for violations of their minor children and proof that a violation, committed by a child, occurred on property within the parents’ control shall constitute a rebuttable presumption that the parent committed the violation, but any such parent may be excused if he/she proves that he/she had previously directed the child not to use the water as it was used in violation of this Plan and that the parent could not have reasonably known of the violation.

d) Any employee of the _______________ (name of your water supplier), police officer, or other _____ employee designated by the ___________ (designated official), may issue a citation to a person he/she reasonably believes to be in violation of this Ordinance. The citation shall be prepared in duplicate and shall contain the name and address of the alleged violator, if known, the offense charged, and shall direct him/her to appear in the _____________ (example: municipal court) on the date shown on the citation for which the date shall not be less than 3 days nor more than 5 days from the date the citation was issued. The alleged violator shall be served a copy of the citation. Service of the citation shall be complete upon delivery of the citation to the alleged violator, to an agent or employee of a violator, or to a person over 14 years of age who is a member of the violator’s immediate family or is a resident of the violator’s residence. The alleged violator shall appear in _________ (example: municipal court) to enter a plea of guilty or not guilty for the violation of this Plan. If the alleged violator fails to appear in __________ (example: municipal court), a warrant for his/her arrest may be issued. A summons to appear may be issued in lieu of an arrest warrant. These cases shall be expedited and given preferential setting in __________ (example: municipal court) before all other cases.

SECTION XI: VARIANCES

The ________________ (designated official), or his/her designee, may, in writing, grant temporary variance for existing water uses otherwise prohibited under this Plan if it is determined that failure to grant such variance would cause an emergency condition adversely affecting the health, sanitation, or fire protection for the public or the person requesting such variance and if one or more of the following conditions are met:

(a) Compliance with this Plan cannot be technically accomplished during the duration of the water supply shortage or other condition for which the Plan is in effect.

(b) Alternative methods can be implemented which will achieve the same level of reduction in water use.

Persons requesting an exemption from the provisions of this Ordinance shall file a petition for variance with the _________________ (name of your water supplier) within 5 days after the Plan or a particular
drought response stage has been invoked. All petitions for variances shall be reviewed by the __________ (designated official), or his/her designee, and shall include the following:

(a) Name and address of the petitioner(s).

(b) Purpose of water use.

(c) Specific provision(s) of the Plan from which the petitioner is requesting relief.

(d) Detailed statement as to how the specific provision of the Plan adversely affects the petitioner or what damage or harm will occur to the petitioner or others if petitioner complies with this Ordinance.

(e) Description of the relief requested.

(f) Period of time for which the variance is sought.

(g) Alternative water use restrictions or other measures the petitioner is taking or proposes to take to meet the intent of this Plan and the compliance date.

(h) Other pertinent information.
SECTION 1  DECLARATION OF POLICY, PURPOSE, AND INTENT
In cases of extreme drought, periods of abnormally high usage, system contamination, or extended reduction in ability to supply water due to equipment failure, temporary restrictions may be instituted to limit nonessential water usage. The purpose of the Drought Contingency Plan (Plan) is to encourage customer conservation in order to maintain supply, storage, or pressure or to comply with the requirements of a court, government agency or other authority.

Please note: Water restriction is not a legitimate alternative if a water system does not meet the Texas Commission on Environmental Quality (TCEQ) capacity requirements under normal conditions or if the utility fails to take all immediate and necessary steps to replace or repair malfunctioning equipment.

SECTION 2  PUBLIC INVOLVEMENT
Opportunity for the public to provide input into the preparation of the Plan was provided by:

(check at least one of the following)
- scheduling and providing public notice of a public meeting to accept input on the Plan

The meeting took place at:

Date: ________________  Time: ________________  

Location: __________________________

- mailed survey with summary of results (attach survey and results)
- bill insert inviting comment (attach bill insert)
- other method ____________________________________ _______________________

SECTION 3  PUBLIC EDUCATION

The ______________________________ (name of utility) will periodically provide the public with information about the Plan, including information about the conditions under which each stage of the Plan is to be initiated or terminated and the drought response measures to be implemented in each stage.

Drought plan information will be provided by:

(check at least one of the following)

- public meeting
- press releases
- utility bill inserts
- other ____________________________________________

SECTION 4  COORDINATION WITH REGIONAL WATER PLANNING GROUPS

The service area of the ______________________________ (name of your utility) is located within Regional Water Planning Group (RWPG) _____.

_____________________________ (name of your utility) has mailed a copy of this Plan to the RWPG.
SECTION 5 NOTICE REQUIREMENTS
Written notice will be provided to each customer prior to implementation or termination of each stage of the water restriction program. Mailed notice must be given to each customer 72 hours prior to the start of water restriction. If notice is hand delivered, the utility cannot enforce the provisions of the plan for 24 hours after notice is provided. The written notice to customers will contain the following information:

1. the date restrictions will begin;
2. the circumstances that triggered the restrictions;
3. the stages of response and explanation of the restrictions to be implemented; and
4. an explanation of the consequences for violations.

The utility must notify the TCEQ by telephone at (512) 239-4691, or electronic mail at watermon@tceq.state.tx.us prior to implementing Stage III and must notify in writing the Public Drinking Water Section at MC - 155, P.O. Box 13087, Austin, Texas 78711-3087 within five (5) working days of implementation including a copy of the utility's restriction notice. The utility must file a status report of its restriction program with the TCEQ at the initiation and termination of mandatory water use restrictions (i.e., Stages III and IV).

SECTION 6 VIOLATIONS
1. First violation - The customer will be notified by written notice of their specific violation.
2. Subsequent violations:
   a. After written notice, the utility may install a flow restricting device in the line to limit the amount of water which will pass through the meter in a 24-hour period. The utility may charge the customer for the actual cost of installing and removing the flow restricting device, not to exceed $50.00.
   b. After written notice, the utility may discontinue service at the meter for a period of seven (7) days, or until the end of the calendar month, whichever is LESS. The normal reconnect fee of the utility will apply for restoration of service.

SECTION 7 EXEMPTIONS OR VARIANCES
The utility may grant any customer an exemption or variance from the drought contingency plan for good cause upon written request. A customer who is refused an exemption or variance may appeal such action of the utility in writing to the Texas Commission on Environmental Quality. The utility will treat all customers equally concerning exemptions and variances, and shall not discriminate in granting exemptions and variances. No exemption or variance shall be retroactive or otherwise justify any violation of this Plan occurring prior to the issuance of the variance.

SECTION 8 RESPONSE STAGES
Unless there is an immediate and extreme reduction in water production, or other absolute necessity to declare an emergency or severe condition, the utility will initially declare Stage I restrictions. If, after a reasonable period of time, demand is not reduced enough to alleviate outages, reduce the risk of
outages, or comply with restrictions required by a court, government agency or other authority, Stage II may be implemented with Stage III to follow if necessary.

**STAGE I - CUSTOMER AWARENESS**

Stage I will begin:

Every April 1st, the utility will mail a public announcement to its customers. No notice to TCEQ required.

Stage I will end:

Every September 30th, the utility will mail a public announcement to its customers. No notice to TCEQ required.

Utility Measures:

This announcement will be designed to increase customer awareness of water conservation and encourage the most efficient use of water. A copy of the current public announcement on water conservation awareness shall be kept on file available for inspection by the TCEQ.

Voluntary Water Use Restrictions:

Water customers are requested to voluntarily limit the use of water for nonessential purposes and to practice water conservation.

**STAGE II - VOLUNTARY WATER CONSERVATION:**

Target: Achieve a ______ percent reduction in ________ (example: total water use, daily water demand, etc.)

The water utility will implement Stage II when any one of the selected triggers is reached:

Supply-Based Triggers: (check at least one and fill in the appropriate value)

- Well level reaches ________ ft. mean sea level (m.s.l.)
- Overnight recovery rate reaches ________ ft.
- Reservoir elevation reaches ________ ft. (m.s.l.)
- Stream flow reaches ________ cfs at USGS gage # ________
- Wholesale supplier’s drought Stage II ________________________________
- Annual water use equals ______% of well permit/Water Right/purchased water contract amount
- Other ____________________________

Demand- or Capacity-Based Triggers: (check at least one and fill in the appropriate value)
Drinking water treatment as % of capacity __________ %

Total daily demand as % of pumping capacity __________ %

Total daily demand as % of storage capacity __________ %

Pump hours per day __________ hrs.

Useable balance of water rights exceeds planned amount, based on time of year

Other __________________________________________

Upon initiation and termination of Stage II, the utility will mail a public announcement to its customers. No notice to TCEQ required.

Requirements for Termination:

Stage II of the Plan may end when all of the conditions listed as triggering events have ceased to exist for a period of three (3) consecutive days. Upon termination of Stage II, Stage I becomes operative.

Utility Measures:

Visually inspect lines and repair leaks on a daily basis. Monthly review of customer use records and follow-up on any that have unusually high usage.

Describe additional measures, if any, to be implemented directly by the utility to manage limited water supplies and/or reduce water demand. Examples include: reduced or discontinued flushing of water mains, activation and use of an alternative supply source(s); use of reclaimed water for non-potable purposes.

The second water source for ______________________________ (name of utility) is:

(check one)

- Other well
- Inter-connection with other system
- Purchased water
- Other _____________________________________________________________

Voluntary Water Use Restrictions:
1. Restricted Hours: Outside watering is allowed daily, but only during periods specifically described in
the customer notice; between 10:00 p.m. and 5:00 a.m. for example;

2. Restricted Days/Hours: Water customers are requested to voluntarily limit the irrigation of
landscaped areas with hose-end sprinklers or automatic irrigation systems. Customers are requested to
limit outdoor water use to Mondays for water customers with a street address ending with the numbers
1, 2, or 3, Wednesdays for water customers with a street address ending with the numbers 4, 5, or 6,
and Fridays for water customers with a street address ending with the numbers 7, 8, 9, or 0. Irrigation of
landscaped areas is further limited to the hours of 12:00 midnight until 10:00 a.m. and between 8:00
p.m. and 12:00 midnight on designated watering days. However, irrigation of landscaped areas is
permitted at anytime if it is by means of a hand-held hose, a faucet-filled bucket or watering can of five
(5) gallons or less, or drip irrigation system; or

3. Other uses that waste water such as water running down the gutter.

**STAGE III - MANDATORY WATER USE RESTRICTIONS:**
Target: Achieve a ______ percent reduction in __________ (example: total water use, daily water
demand, etc.)

The water utility will implement Stage III when any one of the selected triggers is reached:

Supply-Based Triggers: (check at least one and fill in the appropriate value)
- Well level reaches __________ ft. (m.s.l.)
- Overnight recovery rate reaches __________ ft.
- Reservoir elevation reaches __________ ft. (m.s.l.)
- Stream flow reaches __________ cfs at USGS gage # __________
- Wholesale supplier's drought Stage III ___________________________________________________________________
- Annual water use equals ______ % of well permit/Water Right/purchased water contract amount
- Other __________________________________________________________________________

Demand- or Capacity-Based Triggers: (check at least one and fill in the appropriate value)
- Drinking water treatment as % of capacity __________ %
- Total daily demand as % of pumping capacity __________ %
- Total daily demand as % of storage capacity __________ %
- Pump hours per day __________ hrs.
Upon initiation and termination of Stage III, the utility will mail a public announcement to its customers. Notice to TCEQ required.

Requirements for Termination:

Stage III of the Plan may end when all of the conditions listed as triggering events have ceased to exist for a period of three (3) consecutive days. Upon termination of Stage III, Stage II becomes operative.

Utility Measures:

Visually inspect lines and repair leaks on a regular basis. Flushing is prohibited except for dead end mains.

Describe additional measures, if any, to be implemented directly by the utility to manage limited water supplies and/or reduce water demand. Examples include: activation and use of an alternative supply source(s); use of reclaimed water for non-potable purposes; offering low-flow fixtures and water restrictors.

Mandatory Water Use Restrictions:

The following water use restrictions shall apply to all customers.

1. **Irrigation of landscaped areas with hose-end sprinklers or automatic irrigation systems shall be limited to Mondays for water customers with a street address ending with the numbers 1, 2, or 3, Wednesdays for water customers with a street address ending with the numbers 4, 5, or 6, and Fridays for water customers with a street address ending with the numbers 7, 8, 9, or 0.** Irrigation of landscaped areas is further limited to the hours of 12:00 midnight until 10:00 a.m. and between 8:00 p.m. and 12:00 midnight on designated watering days. However, irrigation of landscaped areas is permitted at anytime if it is by means of a hand-held hose, a faucet-filled bucket or watering can of five (5) gallons or less, or drip irrigation system.

2. **Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight.** Such washing, when allowed, shall be done with a hand-held bucket or a hand-held hose equipped with a positive shutoff nozzle for quick rinses. Vehicle washing may be done at any time on the immediate premises of a commercial car wash or commercial service station. Further, such washing may be exempted from these regulations if the health, safety, and welfare of the public are contingent upon frequent vehicle cleansing, such as garbage trucks and vehicles used to transport food and perishables.
3. Use of water to fill, refill, or add to any indoor or outdoor swimming pools, wading pools, or Jacuzzi type pool is prohibited except on designated watering days between the hours of 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight.

4. Operation of any ornamental fountain or pond for aesthetic or scenic purposes is prohibited except where necessary to support aquatic life or where such fountains or ponds are equipped with a recirculation system.

5. Use of water from hydrants or flush valves shall be limited to maintaining public health, safety, and welfare.

6. Use of water for the irrigation of golf courses, parks, and green belt area is prohibited except by hand-held hose and only on designated watering days between the hours 12:00 midnight and 10:00 a.m. and between 8:00 p.m. and 12:00 midnight.

7. The following uses of water are defined as nonessential and are prohibited:
   a. wash down of any sidewalks, walkways, driveways, parking lots, tennis courts, or other hard-surfaced areas;
   b. use of water to wash down buildings or structures for purposes other than immediate fire protection;
   c. use of water for dust control;
   d. flushing gutters or permitting water to run or accumulate in any gutter or street;
   e. failure to repair a controllable leak(s) within a reasonable period after having been given notice directing the repair of such leak(s); and
   f. any waste of water.

STAGE IV - CRITICAL WATER USE RESTRICTIONS:
Target: Achieve a ______ percent reduction in __________ (example: total water use, daily water demand, etc.)

The water utility will implement Stage IV when any one of the selected triggers is reached:

Supply-Based Triggers: (check at least one and fill in the appropriate value)

☑ Well level reaches _________ ft. (m.s.l.)
☑ Overnight recovery rate reaches _________ ft.
☑ Reservoir elevation reaches _________ ft. (m.s.l.)
☑ Stream flow reaches _________ cfs at USGS gage # _________
☑ Wholesale supplier's drought Stage IV __________________________
☑ Annual water use equals ________ % of well permit/Water Right/purchased water contract amount
- Supply contamination
- Other

Demand- or Capacity-Based Triggers: (check at least one and fill in the appropriate value)
- Drinking water treatment as % of capacity
- Total daily demand as % of pumping capacity
- Total daily demand as % of storage capacity
- Pump hours per day
- Production or distribution limitations
- System outage
- Other

Upon initiation and termination of Stage IV, the utility will mail a public announcement to its customers. Notice to TCEQ required.

Requirements for Termination:

Stage IV of the Plan may be rescinded when all of the conditions listed as triggering events have ceased to exist for a period of three (3) consecutive days. Upon termination of Stage IV, Stage III becomes operative.

Operational Measures:

The utility shall visually inspect lines and repair leaks on a daily basis. Flushing is prohibited except for dead end mains and only between the hours of 9:00 p.m. and 3:00 a.m. Emergency interconnects or alternative supply arrangements shall be initiated. All meters shall be read as often as necessary to insure compliance with this program for the benefit of all the customers. Describe additional measures, if any, to be implemented directly to manage limited water supplies and/or reduce water demand.

Mandatory Water Use Restrictions: (all outdoor use of water is prohibited)

1. Irrigation of landscaped areas is absolutely prohibited.
2. Use of water to wash any motor vehicle, motorbike, boat, trailer, airplane or other vehicle is absolutely prohibited.
SYSTEM OUTAGE or SUPPLY CONTAMINATION
Notify TCEQ Regional Office immediately.
